E. PONSONBY, 116 GRAFTON STREET, DUBLIN.

1902.

REPORT.

TO THE RIGHT HON.

LORD BALFOUR OF BURLEIGH, K.T.,

His Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 10th October, 1902.

MY LORD,

I had the honour in 1901, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to your Lordship, as His Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1900, along with the usual Explanation and Commentary.

At the same time my Thirty-sixth Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1900).

I have the honour to be,

MY LORD,

Your most obedient Servant.

STAIR AGNEW,

Registrar-General

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR-CUNYNGHAME, M.D., F.R.S.E.

SIR,

In last Report use was made of the number of the population of Scotland as enumerated on 31st March, 1901, and as obtained from the Summaries sent in by the local Registrars shortly after the above date. The population then given was 4,472,000—males 2,173,151, females

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1900, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS.	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.

Principal Towns above 25,000 inhabitants. Large Towns above 10,000 and under 25,000 inhabitants. The Small Towns from 3000 to 10,000 inhabitants from 1855 to 1870, but from 1871 onwards the Small Towns have from 2000 to 10,000 of population.

&c., is 4,472,103—males 2,173,755, females 2,298,348—showing an understated difference of 103.

The total population of Scotland as estimated to the 30th June 1900, is 4,436,958—males 2,155,512, females 2,281,446.

Table II. shows how the population is distributed in the five Registration Districts into which the country is primarily divided. In the Principal Town Districts the total estimated population is 1,828,594—males 876,289, females 952,305; in the Large Town Districts it numbers in all 586,563—males 288,866, females 297,697; the inhabitants of the Small Town Districts total to 940,985—males 458,979, females 482,006; in the Mainland Rural Districts they are 960,501—males 474,361, females 486,140; and the Insular Rural Districts have a gross population of 120,315—males 57,017, females 63,298.

TABLE IV.—Percentage of Births, Deaths, and Marriages in the Five Groups of Districts of Scotland, to the Population during each of the Years 1855-1900.

YEARS.	Principal Town.			Large Town.			Small Town.			Mainland-Rural.			Insular-Rural.		
	Births.	Deaths.	Mar- riages.	Births.	Deaths.	Mar- riages.	Births.	Deaths.	Mar- riages.	Births.	Deaths.	Mar- riages.	Births.	Deaths.	Mar- riages.

BIRTHS.

The total number of births registered during 1900 is 131,401, and forming a birth-rate of 2·96 per cent., or 296 in every ten thousand of the population, and is the lowest rate noted in these reports.

The mean birth-rate for the last ten years is 3·03 per cent., or 303 per ten thousand of the population as estimated.

The male births for the present year number 67,147, the female 64,254, showing a preponderance of the former of 2893.

The births are in excess of the deaths during the year by 49,105.

The number of illegitimate births registered during the year is 8534, equal to 6·49 per cent. of all births, the same rate as last year and the lowest yet recorded. The male illegitimates are 4338, the female 4196.

Tables VIII. and IX. indicate how the births occur in the five Registration Districts. In the Principal Town Districts the number registered during the year was 57,089—males 29,118, females 27,971, together giving a rate of 3·12 per cent.; in the Large Town Districts they are 18,686—males 9536, females 9150, together showing a birth-rate of 3·19 per cent.; in the Small Town Districts they total to 28,459—males 14,618, females 13,841, at the rate of 3·02 per cent.; in the Mainland Rural Districts they amount to 24,582—males 12,519, females 12,063, a rate of 2·56 per cent.; and in the Insular Rural Districts the births in all are 2585—males 1356, females 1229, giving a birth-rate of 2·15 per cent. to the population of the same.

As to the illegitimate births alone these same Tables show how 3626 of them are registered in the Principal Town Districts—males 1857, females 1769, equal to 6·35 per cent. of the total births in the same; in the Large Town Districts they are 918—males 447, females 471, or 4·91 per cent. of all; in the Small Town Districts they number 1723—males 877, females 846, and equal to 6·05 per cent. of all in those districts; in the Mainland Rural Districts they total to 2124—males 1086, females 1038, at the rate of 8·64 per cent. of all; and in the Insular Rural Districts they are 143—males 71, females 72, and equal to 5·53 per cent. of all the births registered

TABLE V.—Number of Births, Deaths, and Marriages in the Principal Towns of Scotland during 1900, and their Proportion to the Estimated Population; also the Illegitimate Births, and their Proportion to the Total Births.

TOWNS.	Esti- mated Popula- tion, 1900.	BIRTHS.		ILLEGITIMATE BIRTHS.		DEATHS.		MARRIAGES.

Table V. gives similar information as to the Principal Towns of Scotland, where it is seen the highest birth-rate occurs in Coatbridge—3·798 per cent.—followed by Govan and Partick with one of 3·676 per cent., Greenock with one of 3·250 per cent., Leith with one of 3·244 per cent., Glasgow with one of 3·233 per cent., Aberdeen with one of 3·181 per cent., Paisley with one of 3·141 per cent., Kilmarnock with one of 3·092 per cent., Dundee with one of 2·935 per cent., Edinburgh with one of 2·625 per cent., and Perth with one of 2·429 per cent.

As to the illegitimate births alone, the largest percentage of those appear in Dundee—8·80 per cent.—followed by Aberdeen with 8·07 per cent., Edinburgh with 7·93 per cent., Perth with 7·19 per cent., Glasgow with 6·51 per cent., Kilmarnock with 5·09 per cent., Paisley with 4·80 per cent.,

TABLE VII.—Births in Scotland, 1855–1900; with the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; also the Number of Twin and Triplet Births during each year; and the Proportion of Mothers who had Multiple Births.

Leith with 4·10 per cent., Greenock with 3·63 per cent., Govan and Partick with 3·04 per cent., and Coatbridge with 2·82 per cent.

Table VI. shows the same conditions as to each county in Scotland thus—of illegitimate births the lowest proportion to the total births occurs in Shetland, 4·55 per cent.; in Renfrew 4·06 per cent.; and in Dumbarton 3·53 per cent.; the highest falling in Kincardine, 11·16 per cent.; in Elgin, 12·16 per cent.; in Dumfries, 12·30 per cent.; in Banff, 12·56 per cent.; and Wigtown, 13·19 per cent. In fourteen counties the rate is under that for Scotland, which is 6·49 per cent.

Of the total births registered throughout Scotland during 1900 the males numbered 67,147, the females 64,254, which gives a proportion of 104·5 of the former to every 100 of the latter. The corresponding ratio among the legitimate alone is 104·6 males to every 100 females, and among the illegitimate 103·4 males to every 100 females.

During the year 1544 mothers bore twins and 15 bore triplets, so that of the total mothers who bore children one in every 84 bore two and one in every 8655 bore three at a birth.

The births were registered throughout Scotland month by month as follows:—8·91 per cent. during January, 8·80 per cent. during May, 8·78 per cent. during March, 8·70 per cent. during June, 8·65 per cent. during July, 8·64 per cent. during April, 8·60 per cent. during October, 8·53 per cent. during August, 7·88 per cent. during September, 7·56 per cent. during December, 7·54 per cent. during February, and 7·41 per cent. during November.

TABLE VIII.—Births, 1900. Number of Legitimate, Illegitimate, and Total Births in Scotland, and its Five Groups of Districts, distinguishing the Sexes. Also the number of Twin and Triplet Births.

The birth-rate for each ten thousand of the population as estimated for the present year in the following European States is—393 in Hungary, 361 in Prussia, 356 in the German Empire, 344 in Spain, 329 in Italy, 315 in the Netherlands, 301 in Norway, 298 in Denmark, 289 in Belgium, 286 in Switzerland, 269 in Sweden, and 214 in France.

MARRIAGES.

32,444 marriages in all were registered throughout Scotland during the year 1900, a smaller number than during the previous year by 534, and is equal to a marriage-rate of 73·12 per ten thousand of the inhabitants, a lower rate than that for the two previous years. The mean average rate for the last ten years (1890-1899) is 70 per ten thousand of population.

The rate of marriage is, as usual, found to vary in each of the five Registration Districts and in the counties in Scotland. Thus among the former it is in the Principal Town Districts 90·87 per ten thousand of the inhabitants of the same; in the Large Town Districts the rate is 75·44 per ten thousand; in the Small Town Districts it is 65·25 in like proportion; in the Mainland Rural Districts it is 50·26; and in the Insular Rural Districts it is 36·24 per ten thousand of the population (Table VI.). These rates are in each district below what they were in 1899.

In the counties also the rate varies much—from 88·63 per ten thousand of estimated population, the maximum, in Lanark, and 86·18 in Edinburgh, to 33·06, the lowest, in Sutherland. In three counties the rate is above that for all Scotland, which is 73·12 per ten thousand—viz., 73·50 in Forfar, and in Edinburgh and Lanark, as just mentioned. The lowest rates occur in Ross and Cromarty, 38·75; in Bute, 38·37; in Argyll, 37·78; in Caithness, 35·47; and in Sutherland, 33·06—in each case in the like proportion as formerly.

Table V. shows the number of marriages and the corresponding rate in the Principal Towns of Scotland, the latter being in Glasgow equal to 99·4 per ten thousand of its inhabitants; in Edinburgh the rate is 97·6, in Dundee it is 80·1, in Aberdeen it is 89·9, in Govan and Partick it is 64·2, in Leith it is 70·8, in Paisley it is 85·3, in Greenock it is 77·2, in Coatbridge it is 80·5, in Perth it is 91·9, and in Kilmarnock it is 92·3.

* The Free and United Presbyterian Churches were united on 21st October 1900, and after that date formed the United Free Church.

The fertility of the marriages for the year is estimated as usual. The number of marriages registered during 1894 amounted to 27,604, and the legitimate births recorded during the present year (1900) amount to 122,867, so that $\frac{122,867}{27,604}$ gives 4.45 as the average fertility of each marriage, or 445 children were born to every 100 marriages.

Tables X., XI., and XII. afford some information as to the number and proportion of marriages as performed in Scotland and in each of the primary Registration Districts by the clergy of various religious denominations. Thus, of the whole 32,444 marriages, 14,600 were performed by ministers of the Established Church, 4705 during ten months of the year by those of the Free Church, 2769 during the same period by those of the United

* See Note p. xvi. Combined rate for 1900 for Free, United Presbyterian, and United Free Churches = 28·49 per cent.

Church, 2·56 per cent. to the Episcopal Church, 6·47 per cent. to other denominations, in 0·19 per cent. the denomination is not stated, and 2·06 per cent. of all were irregular.

Table Xa. gives the number of marriages celebrated according to the rites of the several religious denominations and the proportions thereof in the Registration Counties and Principal Towns in Scotland. In eight of the counties over 60·00 per cent. of the marriages were solemnized by clergy of the Established Church, viz., Shetland, Kincardine, Haddington, Selkirk, Roxburgh, Dumfries, Kirkcudbright, and Wigtown, and in fourteen more the rate was over 50·00 per cent. In Ross and Cromarty alone is the rate under 20·00 per cent. Marriages performed by ministers of the Free Church are in greatest proportion in Sutherland, 50·70 per cent., and in Ross and Cromarty, 51·85 per cent.; they are at their minimum in Selkirk, Clackmannan, and Kinross, in each case being under 10·00 per cent. Marriages in connection with the United Presbyterian Church bulk most largely in Clackmannan 16·10 per cent., in Orkney 19·62 per cent., and in Kinross 21·43 per cent., being at their minimum in Caithness 0·83 per cent., in Inverness 0·92 per cent., and in Ross and Cromarty 1·35 per cent., there being none in Sutherland. A column is added for the marriages in the United Free Church during the months of November and December (*see* footnote, p. xvi.). Marriages performed in accordance with the rites of the Roman Catholic Church are in largest proportion in Forfar 8·92 per cent., in Inverness 9·45 per cent., in Linlithgow 15·95 per cent., in Lanark 16·36 per cent., in Renfrew 17·35 per cent., and in Dumbarton 21·35 per cent., being lowest in Clackmannan 1·95 per cent., in Elgin 1·34 per cent., in Aberdeen 1·25 per cent., and in Kirkcudbright 0·48 per cent., there being none in Shetland, Orkney, Caithness, Sutherland, Ross and Cromarty, Nairn,

Kincardine, Kinross, and Berwick. Episcopal Church marriages are most in evidence in Nairn with 5·00 per cent., in Edinburgh 5·90 per cent., in Forfar 6·47 per cent., and in Kincardine 9·76 per cent., being least so in Shetland, Ross and Cromarty, and in Inverness, there being none in Orkney, Caithness, Sutherland, Bute, and Wigtown. Marriages performed by clergymen of other denominations than the above are most marked in Renfrew 10·45 per cent., in Ross and Cromarty 11·78 per cent., and in Nairn 12·50 per cent.; least so in Orkney, Kincardine, Haddington, and Kirkcudbright, there being none in Kinross and Bute. Irregular marriages are most noticeable in Lanark, where 9·28 per cent. of all are of this character, and in Edinburgh 13·62 per cent.: they are least so in Roxburgh with 0·36 per cent., in Ross and Cromarty 0·34 per cent., in Linlithgow 0·24 per cent., and in Dumbarton 0·15 per cent., there being none in Shetland, Sutherland, Nairn, Banff, Kincardine, Kinross, Clackmannan, and Berwick.

In the Towns the largest proportion of marriages performed by clergy of the Established Church occurs in Kilmarnock and Perth each 49 per cent.,

Aberdeen 52 per cent., and Leith 54 per cent.; the smallest in Edinburgh 34 per cent., Paisley 33 per cent., and Coatbridge 22 per cent. Marriages celebrated by ministers of the Free Church are mostly in evidence in Paisley and Perth, each with 17 per cent., and Kilmarnock 18 per cent.; least so in Leith 13 per cent., and Glasgow 12 per cent. The highest proportion of marriages performed by ministers of the United Presbyterian Church occur in Glasgow 10 per cent., and Coatbridge and Paisley each with 11 per cent. (*vide* footnote, p. xvi.). Marriages performed under the auspices of the Roman Catholic Church are chiefly in Paisley and Greenock, each 17 per cent., Govan and Partick 18 per cent., and Coatbridge 31 per cent.; least so in Perth, 5 per cent., and Aberdeen 2 per cent. Those in accordance with the usages of the Episcopal Church show the largest ratio

in Edinburgh 7 per cent., and Dundee 9 per cent.; the least in Glasgow, Paisley, and Coatbridge, each 2 per cent. Marriages solemnized by ministers of other denominations than the aforesaid are most marked in Paisley, 11 per cent., Dundee 12 per cent., and Greenock 13 per cent.; least so in Edinburgh 4 per cent. Irregular marriages are most apparent in Glasgow 13 per cent., and Edinburgh 19 per cent.; least so in Leith, Greenock, and Coatbridge, each with some 2 per cent., and in Paisley with 1 per cent.

Of the men and women married during the year all but one of the former and two of the latter stated their age on the occasion. Of the male spouses 2006, or 6·18 per cent. of all, were under 21 years of age at marriage, and of the female 6039, or 18·61 per cent., were the same. Twenty-three of

of the bridegrooms were over 75, and two of the brides between 70 and 75. Table XIII.

The proportion of marriages at various ages in Scotland and in each of the primary Registration Districts is given in Table XIV., where it is seen that in every hundred marriages during the year 2'56 of the husbands were under 20 years of age, the corresponding proportion among the wives being 10'65, those ratios being exceeded in the case of the former in the Principal and Large Town Districts, and of the latter in the Small Town Districts as well. Between 20-25 years, 34'55 per cent. of the men, and 44'10 per cent. of the women married, exceeded in the case of both in the Large and Small Town Districts. Between 25-30 years, 33'97 per cent. of the bridegrooms and 26'88 per cent. of the brides were united, exceeded in the case of the former in the Small Town Districts and Mainland Rural Districts, and of the latter in the two Rural Districts. Between 30-35 years, 13'83 per cent. of the men and 9'76 per cent. of the women married, exceeded in the case of both in the Principal Town Districts and in the two Rural. Between 35-40 years, 6'83 per cent. of the men married, 4'33 being the corresponding ratio for the women, exceeded in the case of the males in the two Rural Districts, and of the females in the Principal Town and Insular Rural Districts. Between 40-45 years, but 3'60 per cent. of the husbands took to themselves wives, and 2'13 per cent. of the latter accepted husbands, the greatest proportion of marriages among the men at this age occurring in the Rural Districts. At ages over this the rate is low, and that in each District.

During the year 28,685 bachelors espoused spinsters, 908 bachelors married widows, 2044 widowers mated with spinsters, and 801 widowers with widows; or 88'41 in every hundred marriages were between bachelors and spinsters, 2'80 between bachelors and widows, 6'30 between widowers and spinsters, and 2'47 between widowers and widows.

Table XVIII. affords some information as to the condition of those marrying during the year from an educational point of view inasmuch as there is here given the proportion of husbands and wives who signed the register upon that occasion, or who in lieu thereof made use of their *mark* only. Thus in Scotland 97'84 per cent. of the men and 97'24 per cent. of the women wrote their names, leaving 2'16 per cent. of the former and 2'76 per cent. of the latter who simply adhibited their *mark* instead. These ratios vary in the different groups of districts, there being in the Principal Town Districts 2'26 per cent. of the husbands and 2'94 per cent. of the wives who did not sign their names; in the Large Town Districts the corresponding proportions are 2'21 per cent. and 2'10 per cent.; in the Small Town Districts they are 2'49 per cent. and 3'45 per cent.; in the Mainland Rural Districts 0'91 per cent. and 1'14 per cent.; and in the Insular Rural Districts 6'88 per cent. of the bridegrooms and 11'24 per cent. of the brides were apparently unable to write their names. In nine of the counties the men made use of *mark* in a greater proportion than was the case for Scotland, the women failing in the same way in eight. The counties in which the former occur are Sutherland, Ross and Cromarty, Inverness, Dumbarton, Argyll, Renfrew, Lanark, Linlithgow, and Peebles; those in which the latter, Caithness, Sutherland, Ross and Cromarty, Inverness, Dumbarton, Lanark, Linlithgow, and Haddington. In the counties of Orkney, Kinross, and Bute the whole both of bridegrooms and brides signed, all the former doing the same in Nairn, and all the latter in Kincardine and Wigtown.

proportions exceeded in the case of both sexes in the Principal and Large Town Districts. The rate falls in the remaining districts, being lowest in the Insular Rural, where 7·852 per cent. of the male infants and 7·797 per cent. of the female succumbed at this early age. In each district the male rate is above the female.

Under two years of age 5·199 per cent. of the males and 4·910 per cent. of the females died in Scotland, ratios which are exceeded in the case of both sexes in the Principal and Large Town Districts, the lowest rate falling in the Rural Districts. The female rate in the Large Town Districts is higher than the male.

Under three years of age the male mortality rate for Scotland is 1·897 per cent., the female 1·837 per cent., exceeded, and that for both sexes, in the Principal and Large Town Districts. The lowest rate occurs in the

TABLE XX.—Percentage of Male and Female Deaths to the Population in Scotland, and its Five Groups of Districts, during each of the Years 1855–1900.

Mainland Rural Districts, 0·898 and 0·805 per cents. In the Principal Town and Insular Rural Districts the female rate is higher than the male.

Under four years of age the rate for Scotland is in the case of the males 1·095 per cent., and of the females 1·176 per cent., proportions exceeded for both sexes in the Principal Town Districts, and in that of the females in the Large Town Districts. The lowest male death-rate at this age falls in the Mainland Rural Districts, and the female in the Insular Rural Districts. In Scotland, in the Principal Town Districts, in the Large Town Districts, and in the Mainland Rural Districts, the female rate is above the male.

Under five years of age the male death-rate for the country is 0·773 per cent., the female 0·789 per cent., proportions exceeded and that for both sexes in the Principal and Large Town Districts. The lowest rates are in the Insular Rural Districts, 0·470 and 0·230 per cents. The female ratios for Scotland, the Principal Town Districts, and the Mainland Rural Districts are above the male.

At all ages under five years 5·084 per cent. of the male children in Scotland and 4·413 per cent. of the female died, proportions exceeded in the case of both sexes in the Principal and Large Town Districts. The lowest rate occurs in the Insular Rural Districts, and in each district the male

rate is higher than the female. Between five and ten years the mortality rate for Scotland fell to 0·418 per cent. in the case of the males, and 0·438 per cent. in that of the females, ratios exceeded by both sexes in the Principal Town Districts. The lowest rate at the age is in the Rural Districts. In Scotland and in the Principal and Small Town Districts the female rate is higher than the male. Between ten and fifteen years the mortality rates are at their lowest, that for the males in Scotland being 0·276 per cent., and for the females 0·306 per cent., ratios exceeded in the case of both sexes in the Principal Town Districts, and by that of the males in the Large Town and Insular Rural Districts. In Scotland, in the Principal Town, Small Town, and Mainland Rural Districts the female rate is higher than the male. Between fifteen and twenty years the male rate for Scotland is 0·464 per cent., the female 0·444 per cent., exceeded as to the males in the Principal Town and Insular Rural Districts, and as to the females in the two Rural Districts. In the Large Town Districts and Mainland Rural Districts the female rate is above that of the male. Between twenty and thirty years the male rate for the whole country is 0·787 per cent., the female 0·677 per cent., ratios exceeded in the case of both sexes in the Principal and Large Town Districts, and of the males in the Insular Rural Districts. In all cases at this age the male death-rate is above that of the female. Between thirty and forty years the male rate for Scotland is 0·979 per cent., the female 0·935 per cent., proportions exceeded and for both sexes in the Principal Town Districts, and for the males in the Insular Rural Districts. After this age the mortality rate at each age rises steadily, and as a rule the Urban rate is above that for the whole country.

Table XXVI. gives the number of deaths at different ages in the Principal Towns of Scotland during 1900, and Table XXVII. the percentage of deaths to the population presumably alive at the same age. Infants under one year died in greatest proportion in Dundee, where 19·92 per cent. of

the mortality among male infants under one year of age formed 23·04 per cent. of the total deaths at all ages, among the females it was 17·99 per cent., proportions exceeded in the case of both sexes in each of the three Urban Districts. At all ages under five years the male rate throughout Scotland was 34·95 per cent., the female 29·18 per cent., ratios exceeded as to both sexes in the Principal and Large Town Districts, and as to the males in the Small Town Districts.

The death-rate per ten thousand of the population as estimated of the following European States during 1900 is 294 in Spain, 269 in Hungary, 237 in Italy, 221 in German Empire, 219 in France, 218 in Prussia, 193 in Switzerland, 178 in the Netherlands, 169 in Denmark, 168 in Sweden, and 158 in Norway.

CAUSES OF DEATH.

82,296 deaths were registered in Scotland during the year, in 81,543 of those the cause was properly specified, leaving 753 as not specified or ill-defined.

The total death-rate for Scotland is 1855 in every hundred thousand of the population, the male rate alone being 1915, and the female 1798.

During the year the number of registered deaths from Zymotics in Scotland is 10,961, being 225 more than those for last year, and are in the proportion of 249 in every hundred thousand of the population, and equal to 13·44 per cent. of the total specified deaths. The incidence of those diseases is most apparent in the Principal Town and Insular Rural Districts, least so in the Mainland Rural Districts. The rate in the Large Town and both Rural Districts is higher this year than in the same for last year.

Table XXXII. gives the number and proportions of deaths from the chief Zymotics and from some ordinary causes, so arranged as to exhibit the mortality due to each at five periods of life. Thus of the whole 10,961 Zymotic deaths 6110 occurred during the first five years of life, 586 between 5-10 years, 180 between 10-15 years, 2050 between 15-60 years, and 2035 at ages over this; the corresponding proportions being 55·7 per cent. during the early period, 5·4 per cent. during the following quinquennial period, 1·6 per cent. during the third quinquennial period, 18·7 per cent. between 50-60 years, and 18·6 per cent. at ages over this, so that of the whole 62·7 per cent. occurred during the first 15 years of life. Table XXXIII. indicates that during the year 22·85 per cent. of the total deaths in Scotland registered as occurring during the first 15 years of life is due to Zymotics, 7·83 per cent. being that at ages above 15.

Smallpox is the cause of 53 deaths in Scotland during 1900, 10 being registered of children under five years of age, 1 between 5-10 years, 2 between 10-15 years, and 40 or 75·5 per cent. between 15-60 years. To Measles 18·25 deaths are attributed, 1655 or 90·7 per cent. of them being of children under five years of age, 112 or 6·1 per cent. between 5-10 years, 16 between 10-15 years, 40 between 15-60 years, and 2 at a greater age. Scarlet Fever caused 654 deaths, 438 or 67·0 per cent. of all during the first five years of life, 147 or 22·5 per cent. between 5-10 years, 33 or 5 per cent. during the following quinquennial period, and 36 at ages above this. From Hooping-cough there are 1812 deaths, the largest number again occurring during the early age, 1738 or 95·9 per cent. of the whole; 70 succumbed between 5-10 years, and 4 at greater ages, 1 of those being over 60. Influenza caused 2711 exits, 205 or 7·5 per cent. between 0-5 years, 19 and 21 between 5-10 years and 10-15 years respectively, 805 or 29·7 per cent.

between 15-60 years, and 1661 or 61·3 per cent. at a greater age than this. Diphtheria is the cause of 771 deaths, 566 or 73·4 per cent. dying before attaining the age of five years, 152 or 19·7 per cent. between 5-10 years, 28 or 3·6 per cent. between 10-15 years, and 25 or 3·3 per cent. between 15-60 years. Continued Fevers account for 698 deaths, 30 or 4·3 per cent. between 0-5 years, 51 or 7·3 per cent. between 5-10 years, 64 or 9·2 per cent. between 10-15 years, 536 or 76·8 per cent. between 15-60 years, and 17 or 2·4 per cent. at ages over 60. Typhus caused 35 deaths, 33 of them between 15-60 years, Enteric or Typhoid caused 644 deaths, 23 or 3·6 per cent. at ages under 5 years, 49 or 7·6 per cent. during the following quinquennial period, 62 or 9·6 per cent. between 10-15 years, 497 or 77·2 per cent. between 15-60 years, and 13 or 2·0 per cent. at a greater age. To Relapsing Fever 1 death is due, to Cerebro-Spinal 2, and to Simple or Ill-defined 16. Plague, for the first time occurring in these Reports as a cause of death, caused 9, 1 before the fifth year of life, 2 between 5-10 years, 1 between 10-15 years, and 5 between 15-60 years. Diarrhoea and Dysentery caused 1593 deaths during the year, 1158 or 72·7 per cent. during the first five years of life, 20 or 1·2 per cent. between 5-10 years, 8 between 10-15 years, 132 or 8·3 per cent. between 15-60 years, and 275 or 17·3 per cent. at greater ages. Syphilis caused 215 deaths, 176 or 81·8 per cent. at ages under 5 years, 1 between 10-15 years, 32 or 14·9 per cent. between 15-60 years, and 6 or 2·8 per cent. at ages over 60. Erysipelas caused 175 deaths, 54 or 30·8 per cent. in children under five years of age, 1 between 5-10 years, 70 or 40·0 per cent. between 15-60 years, and 50 or 28·6 per cent. at ages over this. Puerperal Fever caused 225 deaths, and naturally during the child-bearing period of life. Croup caused 190 deaths, 171 or 90·0 per cent. during the early period of life, 16 or 8·4 per cent. between 5-10 years, 2 between 10-15 years, and 1 of an aged person over 60 years.

Out of every hundred thousand of the population of Scotland 249 are computed to have died from some Zymotic disease during the year, equal to 13·44 per cent. of the total deaths from specified causes. These proportions vary in each of the five Registration Districts; that to the population as above being in the Principal Town Districts 277, and forming 13·75 per cent. of the specified deaths; in the Large Town Districts the ratios are 259 to population and 13·76 per cent. of the total deaths; in the Small Town Districts they are 228 per hundred thousand, and 13·08 per cent. of the deaths; in the Mainland-Rural Districts they are 203 and 12·28 per cent. respectively; and in the Insular-Rural Districts 323 died per hundred thousand of the inhabitants, equal to 17·91 per cent. of the total specified deaths.

Tables XXX. and XXXI. refer in like manner to the Principal Towns; thus in Glasgow Zymotics are the ascribed cause of 332 deaths in every hundred thousand of its population, or 15·26 per cent. of the total deaths are of this nature. Hooping-Cough accounts for 95 of the former, Measles for 62, Diarrhoea and Dysentery for 44, Scarlet Fever for 28, Influenza for 27, Fevers for 24 (2 Typhus, 22 Enteric), Diphtheria for 17, Smallpox for 5, and Plague for 1.

In Edinburgh 226 per hundred thousand of the population succumbed to Zymotics, or 11·93 per cent. of the total deaths. Influenza caused 57 of the former, Measles 41, Diarrhoea and Dysentery 37, Diphtheria 21, Hooping-Cough 20, Scarlet Fever 11, and Fevers 10 (1 Typhus, 9 Enteric or Typhoid).

In Dundee the deaths of 228 persons per hundred thousand of the

inhabitants were accounted for by Zymotics, and formed 10·79 per cent. of the total mortality. Diarrhœal affections are credited with 79, Measles

In Aberdeen the death-rate from Zymotics per hundred thousand of its population was 259, equal to 13·66 per cent. of the total deaths. Of the former, 60 were due to Hooping-Cough, 53 to Influenza, 50 to Diarrhœa and

inhabitants succumbed to Zymotics during the year, and equivalent to 13·87 per cent. of all the deaths. To Hooping-Cough 97 of these are ascribed, 56 to Measles, 35 to Diarrhoea and Dysentery, 15 to Influenza, 11 to Diphtheria, 5 to Fevers (4 Enteric), and 3 to Scarlet Fever.

In Leith the proportion to population from the same is 140, or 8·71 per cent. of all deaths. For 35 of the former ratio Diarrhoeal affections are accountable, for 23 Hooping-Cough, for 22 Measles and Influenza, for 10 Diphtheria, and for 4 Fevers (all Enteric).

In Paisley, 313 persons in every hundred thousand of its inhabitants died from Zymotics, or 15·26 per cent. of all the deaths come under this heading. Measles accounts for 70 of the former, Diarrhoea and Dysentery for 54, Hooping-Cough for 47, Scarlet Fever for 43, Influenza for 33, Fevers for 24 (all Enteric), and Diphtheria for 19.

In Greenock, 285 persons in the above proportion died from Zymotics, equal to 14·88 per cent. of all. For 111 of the former ratio Hooping-Cough is accountable, for 52 Diarrhoea and Dysentery, for 34 Diphtheria, for

19 Fevers (1 Typhus, 18 Enteric), for 18 Scarlet Fever and Influenza, and for 13 Measles.

In Coatbridge, 327 as above to population died from Zymotics, equal to 15·84 per cent. of all deaths. Of the former 63 are due to Scarlet Fever, 55 to Measles, 44 to Diarrhœa and Dysentery, 41 to Influenza, 36 to Diphtheria, 25 to Hooping-Cough, and 22 to Fevers (16 Enteric and 5 Simple or Ill-defined).

In Perth the rate to population from the same is 251, equal to 11·61 per cent. of all deaths. Eighty-nine of this rate are due to Hooping-Cough, 77 to Influenza, 21 to Diarrhœal Affections, 18 to Diphtheria, 15 to Measles, and 9 to Fevers (all Enteric).

In Kilmarnock the death-rate from Zymotics per hundred thousand of its population is 177, equal to 10·95 per cent. of all. Influenza is responsible for 54 of the above, Diarrhœa and Dysentery for 36, Fevers for 30 (all Enteric or Typhoid), Scarlet Fever for 21, Hooping-Cough and Diphtheria each for 9, and Measles for 6.

Fifty-three deaths from Smallpox were registered throughout Scotland during 1900—males 31, females 22. Forty-two of the deaths are registered

in the Principal Town Districts, eight in the Small Town Districts, and three in the Mainland-Rural Districts.

Measles caused 1825 deaths in Scotland—males 955, females 870—being at the rate of 42 in every hundred thousand of population, and equal to 2·24 per cent. of all. The highest mortality ratio from this occurred in the Principal Town, Large Town, and Insular-Rural Districts.

Scarlet Fever caused 654 deaths—males 315, females 339—a rate of 15 per hundred thousand of population and 0·80 per cent. of all deaths, the highest rate occurring in the Principal Town Districts.

To Influenza 2711 deaths are ascribed—males 1152, females 1559—equal to 62 in every hundred thousand of the population, and forming 3·32 per cent. of the total mortality. The districts which suffered most in this respect are the Small Town, Mainland, and Insular Districts, where in every hundred thousand of their respective inhabitants 67, 94, and 221 so succumbed, the corresponding rates in the Principal Town Districts being 36, and in the Large Town Districts 49.

From Hooping-Cough 1812 deaths occur—males 829, females 983—being in the proportion of 41 in every hundred thousand of population, and equal to 2·22 per cent. of all the deaths. The Principal and Large Town Districts show the highest mortality rates from this disease of 66 and 38 respectively, the lowest, 8, falling in the Insular-Rural Districts.

Diphtheria caused 771 deaths in Scotland—males 373, females 398—together equal to 18 per hundred thousand of the population as estimated, and forming 0·95 per cent. of the total mortality. The highest rate occurs in the Principal Town Districts, being the same as that for Scotland, and in the Large Town Districts, where it is 24, the lowest, 5, occurring in the Insular-Rural Districts.

Continued Fevers caused 698 deaths—males 421, females 277—at a rate

TABLE XXXII.—Number and Proportion of Deaths at different Ages from the Zymotic and Ordinary Diseases in Scotland in 1900.

of 16 per hundred thousand of population, and forming 0·86 per cent. of all deaths. The highest rates occur in the Large and Small Town Districts, viz., 19 and 18 respectively. Typhus Fever caused 35 deaths, males 19, females 16; Enteric or Typhoid caused 644—males 392, females 252—equal to 15 in every hundred thousand inhabitants; Relapsing Fever caused the death of one male, Cerebro-Spinal Fever of one male and one female, and Simple or Ill-defined of eight of each sex.

Plague, for the first time mentioned in these Reports, is the registered cause of nine deaths—males 6, females 3. Eight occurred in Glasgow and one in Govan.

Table XXXVII. indicates that 115 of the deaths from Enteric Fever were registered in the Rural Districts, forming 92·74 per cent. of the total fever mortality in the same, while 529 of them occurred in the Urban Districts, equal to 92·16 per cent. of the fever mortality there. From Typhus there are three deaths in the Rural Districts, and 32 in the Town Districts; the two deaths from Cerebro-Spinal Fever being registered in the latter.

Diarrhœa and Dysentery caused 1593 deaths during the year—males 828, females 765—being at the rate of 36 in every hundred thousand of population, and forming 1·95 per cent. of the total deaths. The rate from these diseases to population as before is 45 in the Principal Town Districts, 39 in the Large Town Districts, 34 in the Small Town Districts, 22 in the Mainland-Rural Districts, and 13 in the Insular-Rural Districts.

To Cancer 3503 deaths are ascribed—males 1361, females 2142—being at the rate of 80 per hundred thousand of the population of Scotland, and equal to 4·30 per cent. of the deaths in the same. The rate in each district from Cancer is, 84 in the Principal Town Districts, 70 in the Large Town Districts, 77 in the Small Town Districts, 83 in the Mainland-Rural Districts, and 56 in the Insular-Rural Districts, and in every one, with the exception of the Insular-Rural, the female rate is higher than the male. Tables XXX. and XXXI. exhibit the incidence of Cancer in each of the Principal Towns:—thus, in every hundred thousand of the inhabitants of Edinburgh 116 are estimated to have succumbed to this disease, 102 in Greenock, 92 in Perth, 86 in Dundee, 85 in Aberdeen, 84 in Paisley, 81 in Kilmarnock, 76 in Glasgow, 74 in Leith, 55 in Coatbridge, and 50 in Govan and Partick.

Deaths caused by disease of a Tubercular character are 10,366 in number—males 5303, females 5033—and equal to 235 in every hundred thousand of population, forming 12·68 per cent. of all deaths. These rates occur in the five districts as follow:—271 or 13·44 per cent. in the Principal Town Districts; 247 or 13·11 per cent. in the Large Town Districts; 213 or 12·21 per cent. in the Small Town Districts; 185 or 11·22 per cent. in the Mainland-Rural Districts; and 207 or 11·50 per cent. in the Insular-Rural Districts. Of such deaths Phthisis is the chief cause, 7299 dying from this disease in Scotland during 1900, males 3708, females 3591, together equal to 166 in every hundred thousand of the inhabitants, and 8·95 per cent. of all deaths. The mortality rate to population from Consumption in each district is 188 in the Principal Town Districts, 169 in the Large Town Districts, 147 in the Small Town Districts, 139 in the Mainland-Rural Districts, and 182 in the Insular-Rural Districts. In every 100 male deaths from this disease, 318 or 8·6 per cent. of all died under 15 years of age, 2554 or 68·9 per cent. between 15-45 years, and 836 or 22·5 per cent. at greater ages: the corresponding proportions among the females being 441 or 12·3 per cent. under 15 years of age, 2585 or 72·0 per cent. between 15-45 years, and 565 or 15·7 per cent. at greater ages. In Dundee 213 in

every hundred thousand of its inhabitants died from Phthisis during the year, 208 in Perth, 198 in Glasgow, 193 in Leith, 190 in Edinburgh, 175

deaths in Scotland, males 501, females 438; Tubercular Meningitis caused 1208 deaths, males 605, females 603; and Scrofula caused 890, males 489, females 401.

Diseases of the Brain and Nervous System account for 9408 deaths, males 4708, females 4700, giving a mortality rate of 214 per hundred thousand of population, and equal to 11·54 per cent. of all deaths. The highest rate occurs in the Principal Town Districts 226, and in the Large Town Districts 237, the lowest in the Insular-Rural Districts 146. Among the Principal Towns the rates fall as follows, the highest being 291 per hundred thousand of the inhabitants in Perth, followed by Paisley 285, Greenock 259, Dundee 239, Coatbridge 234, Aberdeen 229, Glasgow 226, Kilmarnock 222, Edinburgh 216, Govan and Partick 205, and Leith 157. Of these diseases in all Scotland Apoplexy caused 3333 deaths, males 1475, females 1858; Paralysis 1599, males 781, females 818; Epilepsy 292, males 163, females 129; and Convulsions 1178, males 672, females 506.

Diseases of the Circulatory Organs caused 7858 deaths, males 3759, females 4099, at a rate of 179 per hundred thousand of population, and

1869	64	1885	39		
1870	114	1886	24		

9·64 per cent. of the total deaths. The rates occur in the districts as follow :—168 in the Principal and Large Town Districts, 185 in the Small Town Districts, 204 in the Mainland-Rural Districts, and 156 in the Insular-Rural Districts. In the Principal Towns the highest rate is in Perth 218, followed by Dundee with one of 208, Edinburgh with one of 196, Aberdeen with one of 195, Greenock with one of 175, Leith with one of 166, Paisley with one of 162, Coatbridge with one of 154, Glasgow with one of 149, Kilmarnock with one of 141, and Govan and Partick with one of 122.

Diseases of the Respiratory Organs caused 15,018 deaths—males 7859, females 7159—giving a rate of 3·42 in every hundred thousand of population, and equal to 18·42 per cent. of all deaths. The rate in the Principal and Large Town Districts is above that for Scotland, being in the former 419 and in the latter 349 to the population as before; in the Small Town Districts the corresponding rate is 288, in the Mainland-Rural Districts 256, and in the Insular-Rural Districts 222. The percentages in each to the total deaths are 20·80 in the Principal Town Districts, 18·54 in the Large Town Districts, 16·51 in the Small Town Districts, 15·53 in the Mainland-Rural Districts, and 12·33 in the Insular-Rural Districts. Bronchitis caused in Scotland 6914 exits, males 3287, females 3627; Pneumonia caused 6270 deaths, males 3593, females 2677; and Croup caused 190, males 109, females 81. In the Principal Towns of Scotland the highest rate from this class of disease occurred in Glasgow, where in every hundred thousand of its inhabitants 496 so succumbed; in Dundee the rate is 482, in Govan and Partick it is 403, in Coatbridge it is 385, in Perth it is 383, in Paisley it is 371, in Aberdeen it is 330, in Greenock it is 328, in Edinburgh it is 318, in Leith it is 278, and in Kilmarnock it is 258.

From diseases of the Digestive System there are 5777 deaths in all, males

2959, females 2818, together affording a mortality rate of 131 in every hundred thousand of population, and forming 7·08 per cent. of all the deaths. In each Urban District the rate is higher than that for Scotland, being to population 142 in the Principal Town Districts, 137 in the Large Town Districts, and 134 in the Small Town Districts; in the Mainland-Rural Districts it is 111, and in the Insular-Rural Districts 90 in like ratio. The rates in the Principal Towns are 160 in Aberdeen, 157 in Coatbridge, 155 in Paisley, 151 in Glasgow, 144 in Perth, 138 in Kilmarnock, 132 in Dundee, 130 in Edinburgh, 120 in Govan and Partick and in Greenock, and 111 in Leith. Enteritis caused 1675 deaths, males 894, females 781; Peritonitis caused 753, males 387, females 366; Hernia caused 159, males 90, females 69; Liver Diseases caused 787, males 399, females 388; Ileus, Stricture of the Intestine, and Intussusception, together caused 476, males 242, females 234.

Diseases of the Urinary Organs are accountable for 2185 deaths, males 1311, females 874, together giving a death-rate of 50 per hundred thousand of population, and 2·68 per cent. of all deaths. Acute Nephritis caused 471 deaths, Bright's Disease 1069, Calculus 27, other diseases of the Bladder and Prostate 388, and 230 are caused by various morbid conditions of the same organs not mentioned above.

Diseases of the Organs of Reproduction or Generation caused 526 deaths, males 8, females 518. To Ovarian Disease 57 deaths are due, and to Uterine Affections 90. Diseases incidental to Parturition inclusive of Puerperal Fever, to which latter 225 deaths are ascribed, together cause a total of 567.

From diseases of the Organs of Locomotion—Bones and Joints—there

are 297 deaths, males 176, females 121, equal to 7 in each hundred thousand of population; and to diseases of the Skin 213 deaths are ascribed, males 101, females 112.

Developmental Disease, not including Old Age, is credited with 2764 exits, males 1534, females 1230. Premature Birth accounts for 2172, Atelectasis for 180, Cyanosis, Spina Bifida, and other Congenital Malformations for 412. The deaths of 4585 persons are ascribed to Old Age, males 1695, females 2890, at a rate of 104 per hundred thousand of population. At ages between 95-100 years 41 men and 108 women died, while 3 of the

From Violence 3422 lives were lost, males 2483, females 939, together giving a mortality rate of 78 per hundred thousand of population (male rate 116, female 42), and equal to 4.20 per cent. of all deaths. Accident or Negligence accounts for 3181, males 2312, females 869. Those due to Violence other than Accident give a total of 241, males 171, females 70, and of those 19 are Homicidal and 222 Suicidal.

Of the Accidental deaths 166 occurred in mines and quarries, all males. Railways were the cause of 286, males 275, females 11. Horses caused the death of 15, males 13, females 2; and Machinery of 35 males. The lives of 446 persons were terminated by Suffocation, males 241, females 205, of whom 107 males and 112 females died thus in bed.

Drowning accounts for 651 deaths, males 554, females 97; of those 592 are Accidental, males 518, females 74, and 58 Suicidal, males 36, females 23. From Poison 142 deaths are registered, males 99, females 52. In the case of 78 males and 47 females the poisoning was accidental, while 12 males and 5 females had recourse to poison for the purpose of ending their own lives.

The poisons which caused death accidentally are Opium in the case of 17 males and 13 females; Morphia, 1 male, 2 females; "A Narcotic," 3 males, 1 female; Chloroform, 9 males, 3 females; Carbolic Acid, 6 males, 5 females; Phosphorus, 2 males, 1 female; Ammonia, 1 male, 3 females; Ammoniacal Fumes, 2 males; "A.B.C." Liniment, 1 male, 1 female; Belladonna, 1 male; Hydrocyanic Acid, 1 male; Arsenic, 1 female; Bichromate of Potash, 1 male; Saltpetre, 1 female; Bisulphide of Carbon, 1 male; Lead, 5 males; Alcohol, 4 males, 3 females; Methylated Spirits, 1 female; a Ptomaine, 8 males, 4 females; Coal Gas, 4 males, 5 females; Carbonic Acid Gas, 3 males; "Poisonous" Gas, 1 male; Dynamite, 1 male; an Irritant Poison, 1 male, 1 female; Unripe Fruit, 1 male, 1 female; Eating Some Plant, 1 female; Not Stated, 4 males.

The poisons by which Suicide was effected are Opium, 7 males, 2 females; Chloral, 1 female; Carbolic Acid, 2 males; Mercury, 1 male; Arsenic, 1 male; Ammonia, 1 female; Antimony, 1 female; Not Stated, 1 male.

Table XXXIX_a shows the method by which Suicide was accomplished in Scotland in each of the Five Districts, Counties, and Principal Towns during 1900:—Thus in Scotland 10 males and 1 female ended their existence on railways, 13 males and 1 female shot themselves, 40 males and 9 females died by cutting or stabbing themselves, 6 males and 3 females threw themselves from a height, 36 males and 23 females drowned themselves, 43 males and 19 females hanged themselves, 12 males and 3 females had recourse to poison, and 1 male took his own life in a manner which is not stated.

Sixty-five of the male Suicides and 15 of the female were effected in the Principal Town Districts, 15 of the male and 7 of the female in the Large Town Districts, 45 of the male and 16 of the female in the Small Town Districts, 33 of the male and 21 of the female in the Mainland-Rural Districts, and 3 of the male and 2 of the female in the Insular-Rural Districts.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of the year are the Notes made by Dr. Buchan, under the direction of the Council of the Scottish Meteorological Society, which appear in the Registrar-General's Quarterly Reports:—

The weather of *January* was characterised by a barometric pressure a little under the average, with a small monthly range; a mean temperature rather above the average, with a mean daily range much less than the average; a mean humidity a little above the average; a mean rainfall considerably above the average, and falling on a very large number of days, not hitherto exceeded in January; and two days' excess of westerly and two days' excess of east-north-easterly winds.

The mean barometric pressure was very unequally distributed, the greater depression, being in the north-east, amounted to half the tenth of an inch. On the other hand, in the west from the South Hebrides to Islay, pressure was nearly two hundredths above the average.

The mean temperature was $38^{\circ}5$, or $1^{\circ}3$ above the average, the temperature of the days being $1^{\circ}0$ and the nights $1^{\circ}7$ higher. The excess of temperature was, on the whole, equally distributed over the various districts of the country. The absolutely highest temperature was $59^{\circ}0$ on the 22nd and 23rd at Broomlands, and the lowest $20^{\circ}0$ on the 1st at Dollar. A marked feature of the temperature was the comparatively high readings which obtained during the nights. In previous Januarys the lowest night temperature in 1898 was $22^{\circ}5$, in 1882 $21^{\circ}9$, and in 1900 it was $20^{\circ}0$. In all the other years since 1856, much lower readings were obtained in Scotland. In 1900 the lowest reading at Leith was $32^{\circ}1$.

The mean rainfall was 5.14 inches, or 25 per cent. above the average. Its distribution over the country was very peculiar, being slightly under the average, or only very slightly above it in Galloway, and on the west coast from Cape Wrath to Skye; but in all other parts of the country above the average, and over great breadths very considerably so. The excess was greatest on the coasts of the Moray Firth and for some distance inland, being generally upwards of 60 per cent.; between two lines, one drawn from Islay to Aberdeen, and the other from Ayr to the mouth of the Tweed. Here the excess rose to 103 per cent. at Campbeltown, 90 per cent. at Montrose, and 73 per cent. at Smeaton in East Lothian; and very generally over this wide district the excess was one-half more than the average. The month was persistently rainy throughout, there being no day of the month on which rain did not fall at a large number of the stations. The largest monthly amounts were 13.47 inches at Lochbuie and 12.84 inches at Glen-carron; whilst on the top of Ben Nevis 35.32 inches fell, being the heaviest fall in January hitherto recorded at this elevated position.

The weather of *February* was characterised by a very low mean barometric pressure, with a very large monthly range; an unusually low mean temperature, with a large mean daily range; a very low mean humidity; a mean rainfall somewhat above the average, falling on nearly the usual number of days for February; and a large excess of north-easterly winds, blowing with a force a little under the average.

The mean barometric pressure was 29.549 inches, or 0.304 inch below the average. This is one of the lowest mean pressures yet recorded for this month. It was much more below the average in the south and east than in the north and west; thus, while on the Solway pressure was 0.355 inch under the average, at North Unst it was only 0.137 inch. The relatively higher pressure thus indicated at northern and western stations than usual, resulted in an excess of wind two days from N., and one day from each of the directions N.E., E., and S.

The mean temperature was $32^{\circ}2$, or $6^{\circ}1$ less than the average, the days being $5^{\circ}2$ and the nights $7^{\circ}1$ colder than usual. This is the second lowest

mean temperature that has occurred since 1856, the lowest being $29^{\circ}0$ in 1895, when a like excess of north-easterly winds prevailed. In that year, the mean barometric pressure was one of the highest recorded, but in that month, as stated at the time, "pressure was, as compared with the average, much higher in the north and west than in the south and east, and accordingly northerly and easterly winds prevailed five days more than the average"; thus showing impressively that it is the manner in which barometric pressure is distributed over the country, and not the amount of the pressure that rules the character of the weather. As happens in such weather at this season, the lowest temperatures were experienced at inland stations, whereas round the coasts the weather was much less severe. The absolutely highest temperature was $54^{\circ}2$ at Belvidere Hospital, Glasgow, and the lowest $-1^{\circ}0$ at Drumlanrig on the 12th.

The mean rainfall was 3.55 inches, or 14 per cent. above the average. The rainfall, including snow, was above the average at stations in the east from the mouth of the Spey to the Tweed and for a considerable distance inland; in Galloway and South Ayrshire, Bute and Arran, and at several places in Orkney and Caithness. In all other parts of the country less than the average rainfall was recorded. In several places the amount was very great, exceeding their averages, in percentages, 210 at Duns Castle; 145 at Broomlands; 125 at Gordon Castle and St Abbs; 98 at Logie Coldstone; and fully 80 at stations in Mid and East Lothian. On the other hand, to the west of a line drawn from Nairn to Oban, the average deficiency was about 50 per cent. The third week of February 1900 will be long remembered for the widespread and severe wind and snowstorms, for the shipping disasters all round the Scottish coasts, and for serious interruption to telegraphic and railway communication.

The weather of *March* was characterised by an unusually high barometer, with a monthly range considerably under the average; a very low mean temperature, with a mean daily range a little under the average; a mean humidity slightly under the average; a very small rainfall, falling on four days fewer than the average; and six days' excess of northerly and easterly winds.

The mean barometric pressure was 30.074 inches, or 0.248 inch above the average. This high pressure has been exceeded only in 1856 and 1875 when it was respectively 30.195 inches and 30.151 inches. The excess was very much larger at western and northern stations than at stations in the east and south. From this manner of distribution of the pressure resulted the extraordinary prevalence of northerly and easterly winds, with the accompanying dryness and cold which marked the weather of the month.

The mean temperature was $37^{\circ}3$, or $2^{\circ}1$ less than the average, which was nearly equally distributed between the days and the nights. Temperature was considerably lower in the east and south than in the west and north. The absolutely highest temperature was $59^{\circ}0$ on the 11th at Ochertyre; and the lowest $3^{\circ}0$ on the 18th at Haddo House.

The mean rainfall was 1.31 inch, or 54 per cent. under the average. The greater part of this precipitation fell as snow. To the east of a line passing through Montrose, Braemar, Nairn, Invershin and Dunrobin, the precipitation was above the average, in a few cases largely so, the excess being occasioned by the heavy snowfalls. In all other parts of Scotland the amounts were under the averages. Indeed, over extensive districts, only from a tenth to a fourth of the average was collected. During the first fortnight little or no rain or snow fell, except in the above districts

where for the month the average was exceeded. At the Ben Nevis Observatory, which was in the very dry district, 3·84 inches were collected, being the lowest hitherto recorded in March, and forming a strong contrast to the preceding January, when there fell 35·32 inches of rain and melted snow.

The weather of *April* was characterised by a mean barometric pressure a little less than the average, with a monthly range greatly above it; a mean temperature a degree and a half above the average, with a mean daily range unusually large, being, indeed, only exceeded since 1856 by the *Aprils* of 1892 and 1893, the means of which were respectively 18°·5 and 18°·7; a mean humidity, a little under the average; a mean rainfall, a little in excess of the average, falling on three days more than the average; and a large excess of W.-N.-W. winds.

The mean barometric pressure was 29·850 inches, or 0·038 inch less than the average. The deviations from the averages among the stations differed very widely from each other. Thus, while in Shetland mean pressure was 0·100 inch less than the average, at the Mull of Galloway it was 0·025 inch above it; and, further, the deficiency was much greater at eastern than at western stations—resulting in 4 days' excess of W. winds and two days of N.-W. winds, and a corresponding deficiency of easterly winds.

The mean temperature was 45°·7, or 1°·5 above the average, the days being 3°·0 above the average, while the nights were only the average. Thus the higher temperature was wholly occasioned by the greater warmth of the days. In Shetland and Caithness the mean temperature was about half a degree under the average, but temperature gradually increased on advancing inland towards the south-east, till it rose to 2°·0 above the average over the district lying between the Firth of Forth and the Tweed. On the other hand, the excess of temperature was only half a degree over Galloway. At the end of the third week temperature was unusually high for the season, when the absolutely highest for the month (75°·0) occurred at Aberdeen on the 20th. On the other hand, low temperatures were observed in the beginning of the first and the fourth weeks, the absolutely lowest for the month being 21°·0 on the 30th at Lednathie.

The mean rainfall was 2·66 inches, or 20 per cent. above the average. The rainfall was under the average to the east of a line drawn from Peterhead, and passing Braemar, Ochtertyre and Rosewell to the mouth of the Tweed, the prevailing winds having been, in crossing the Grampians, drained of much of their moisture. Over this important agricultural part of Scotland, the deficiency was from one third to a half of the average rainfall of April. Over all other parts of the country the rainfall exceeded the average, the greatest excess, nearly double the average, falling over the districts to north-west of the Grampian Range. At stations in the west from Mull to the Solway, the excess was only from one sixth to half the average. The larger portion of the rain fell from the 10th to the 16th. Fogs were pretty general on the 18th and 19th in the west, and more general from the 21st to the 24th. Storms occurred from the 3rd to the 5th in Orkney and Shetland; and from the 12th to the 16th south of the Grampians.

The weather of *May* was characterised by a mean barometric pressure slightly under the average, with a monthly range greatly above it; a mean temperature a little under the average, with a mean daily range half a degree under it; a mean humidity considerably under the average; a mean rainfall a little above the average, falling one day more than the average; and the wind near the average both as regards direction and force.

The mean barometric pressure was 29·923 inches, or 0·017 inch less than the average. Departures from the averages varied considerably in different districts; the greatest difference, 0·050 inch under the average, was in the southern half of the Outer Hebrides, whilst, in Wigtownshire, pressure slightly exceeded the average.

The mean temperature was 48°·7, or 0°·3 less than the average, the days being 0°·5 above the average, and the nights the average. The distribution of temperature was very irregular, being above the average within the space circumscribed by a line passing through Dundee, Kingussie, Glencarron, Monach, Barrahead, Campbeltown, Turnbery, Roslin, and St. Abbs. The highest temperatures, about a degree above the average, were in Mid and East Lothians, and Lower Clydesdale. On the other hand, in Galloway, Islay, and Orkney, temperature was a degree under the average, and in Shetland a degree and a half. The absolutely highest temperature was 75°·0 on the 16th at Paisley, and the lowest, 21°·8, on the 2nd at Lednathie.

The mean rainfall was 2·52 inches, or 10 per cent. above the average. Its distribution was extremely irregular, being in excess of the average in Caithness, the Outer Hebrides, and to the south and west of a line passing through Glenquoich, Braemar, Dollar, Dumbarton, Leadhills, and Wolfelee. Over this large area, the excess was generally a half more than the average, which, however, was much exceeded at individual stations, being above the average stated in percentages, 135 at the Mull of Kintyre; 120 at Leadhills; 103 at Stronvar; 89 at Cally; and 82 at Fort William. Elsewhere, the rainfall was under the average, the greatest deficiency occurring south of the Firth of Forth and in Aberdeen, where the fall was only half the average. Nearly the whole of the rain fell during the first and third weeks. Almost no rain fell from the 9th to the 16th and on the last three days of the month. The first five days of the month were stormy, especially in the west. Thunderstorms were not reported.

The weather of *June* was characterised by a mean barometric pressure somewhat under the average, with a monthly range a little above it; a mean temperature nearly a degree above the average, with a mean daily range just below the average; a mean humidity considerably above the average; a mean rainfall, fully half an inch more than the average, falling on two days in excess of the average; and four days' excess of easterly winds, blowing with a force much under the average.

The mean barometric pressure was 29·883 inches, or 0·059 inch less than the average. Barometric pressure was under the average to a much greater extent in the south and west than in the north and east, thus forming gradients for the excess of easterly winds which prevailed.

The mean temperature was 55°·7, or 0°·8 above the average, the excess being equally partitioned between the days and nights. Owing to the great excess of easterly winds from the North Sea, which, at this season, is much lower in temperature than the land, the mean temperature over a narrow strip along the whole of the east coast was under the average, the deficiency at a number of stations amounting to a degree and a half; and it is deserving of remark that the deficiency extended inland down the Caledonian Canal as far as Fort Augustus. Over every other part of Scotland temperature was above the average, the greatest excess, from 2°·0 to 3°·5, being at western stations, in other words, in those districts at which the easterly winds arrived after the longest passage over the heated land. Thus, while at Peterhead temperature was 1°·8 under the average, it was 3°·4 above it at Kyleakin; and while at Arbroath it was 1°·6 under, it was 3°·1 above the average at Rothesay. The absolutely highest temperature was 79°·0 at

Fort William on the 13th, Airds on the 10th, and Rothesay on the 16th; and the lowest $33^{\circ}0$ on the 23rd at Lednathie.

The mean rainfall was 3.17 inches, or 23 per cent. above the average. The distribution of the amount was extremely irregular. It was under the average near the coast from the Firth of Forth to Montrose; the north-east of Aberdeenshire; the head of the Moray Firth, Caithness, Orkney, and Shetland; and nearly the whole of the West Coast from Cape Wrath to the Mull of Galloway. In these scattered districts the deficiency varied generally from 25 to 75 per cent. Over all the rest of Scotland, the rainfall was above the average. In some places the excess was great, being stated in percentages, 122 at Dumbarton; 113 at Stobo Castle; 100 at Cally; and more than 75 per cent. at Dumfries, Glasgow, Lednathie, and Haddo House. The first five days of the month were rainless, but rains were frequent and mostly widespread during the rest of the month. Thunderstorms, often accompanied with heavy rains, were unusually frequent during the month, particularly on the 6th, 10th to the 13th, 20th to the 23rd, and 30th. The thunderstorm of the 11th was remarkably severe. But the most striking meteorological feature of the month was the extraordinary prevalence of fogs in the east and north as far as North Unst from the 2nd to the 4th, and 14th to the 24th. Fogs, but much less general and persistent, occurred in the west to the south of Islay from the 5th to the 19th. No storms of wind are reported.

The weather of *July* was characterised by a mean barometric pressure considerably above the average, with a monthly range a good deal under it; a mean temperature greatly in excess of the average, with a mean daily range a degree under it; a mean humidity a little above the average; a mean rainfall a little above the average, falling on four days more than the average.

The mean barometric pressure was 29.929 inches, or 0.043 inch more than the average. The singular feature of the geographical distribution of pressure is that it was greater in the extreme northern and extreme southern stations than at stations intermediate, resulting in a greater prevalence of northerly winds in the northern half of Scotland, and south-westerly winds in the southern half of Scotland, accompanied with the differences of temperature observed under these conditions.

The mean temperature was $58^{\circ}9$, or $1^{\circ}7$ above the average, the days being $1^{\circ}1$ and the nights $2^{\circ}2$ above the respective averages. The distribution of temperature was very unequal. In Shetland, where northerly winds prevailed most, it was half a degree under the average; whereas in the south, where southerly winds prevailed, the excess was about three degrees in Tweeddale. This district being well protected to westward by broad ranges of hills, the winds on arriving there were drier, and the sunshine consequently stronger. The warmest weather was from the 11th to the 20th, and 23rd to 28th. The absolutely highest temperature was $83^{\circ}0$ on the 20th at Pinmore; and the lowest, $36^{\circ}0$, on the 7th at Benquhat, and on the 8th at North Esk Reservoir.

The mean rainfall was 3.61 inches, or 15 per cent. above the average. The amounts of rainfall were very unequally distributed. South of the Forth and Clyde it was generally, but to no great extent, under the average; also slightly under the average in western Ross-shire. On the other hand, it was above the average in the northern islands, Caithness, the shores of the Moray Firth, and along the east coast as far south as Arbroath, the excess exceeding 70 per cent. at Bressay, Stromness, Thurso, Pentland Skerries,

Dunrobin, and Gordon Castle. A striking feature of the rainfall was the unusual frequency with which it fell, and a singular absence of heavy daily falls anywhere. Except at a very few places during thunderstorms, the amount collected on any day did not exceed an inch. Thunderstorms were of general occurrence on the 2nd, 3rd, 12th, 16th, 20th, and 21st. There were no gales or storms of wind.

The weather of *August* was characterised by a mean barometric pressure and monthly range both much in excess of the average; a mean temperature somewhat under the average, with a mean daily range also under the average; a mean humidity a little under the average; a mean rainfall about a fourth part above the average; and six days' excess of northerly and easterly winds.

The mean barometric pressure was 29·950 inches, or 0·092 inch in excess of the average. The excess was very much greater in the north and east than in the south and south-west. This distribution of the pressure resulted in the prevalent winds above referred to, the winds in excess of the average being N. 1 day, N.E. 2 days, E. 3 days, and S.E. 1 day.

The mean temperature was 55°·8, or 0°·8 less than the average, the days being 1°·1 and the nights 0°·6 less than the average. The distribution of the temperature over the country was unusually abnormal. Everywhere to the north and west of a line from Inverness, passing down the Caledonian Canal to Oban, and thence to Greenock and Loch Ryan, temperature was above the average; but in all other districts it was under the average, the greatest deficiency from 1°·5 to 2°·0 occurring in the east from Kinnaird Head to the Tweed, at which the easterly winds arrived direct from the sea. But as winds advanced westward, temperature gradually increased till at Rothesay, Poltalloch, and Skerryvore it was a degree above the average, and in the Outer Hebrides nearly two degrees. The absolutely highest temperature was 82°·8 on the 14th at Lairg, and the lowest 34°·0 on the 27th at Kingussie.

The mean rainfall was 4·46 inches, or 23 per cent. above the average. It was under the average in Shetland, Orkney, Caithness, Sutherland, Wester Ross, Skye, and detached portions of Perthshire, and Argyllshire, the deficiency scarcely exceeding a third of the average anywhere. In other

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1900, compared with the Mean of the Ten Years 1881-1890.

YEAR 1900.				1881-1890.	
MONTHS.	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.
January	38·5	8495	1239	1157	37·5
February	32·2	9299	1356	1052	37·9
March	37·3	8312	1213	1139	38·9
April	45·7	7254	1058	1052	43·1
May	48·7	6564	958	1031	49·0
June	55·7	5833	851	941	54·1
July	58·9	5891	859	916	56·5

December	42·7	6669	973	1112	37·0
YEAR	46·4	82,267	12,000	12,000	45·8

parts of the country the rainfall was above the average, the greatest excess being south of the Forth and Clyde. The greatest excess was fully 80 per cent. in Berwickshire, and fully 50 per cent. in Galloway. Little rain fell from the 13th to the 18th, and from the 24th to the 30th. On the other hand very heavy daily falls are reported on the 1st, 6th, 12th, 19th to the 22nd and the 31st; the weather of this month thus differing widely from that of July. On the above dates daily falls of upwards of an inch were frequent, and even daily falls exceeding two inches were not uncommon. These heavy rains often accompanied with high winds did great and extensive damage to the standing crops, and seriously interfered with the use of the reaping machine. Storms, as distinguished from high winds, occurred only in the north-east, from Montrose to Nairn on the 6th and 7th, and round the Minch on the 22nd and 23rd.

The weather of *September* was characterised by a rather high barometric pressure, with a monthly range considerably above the average; a mean temperature, a degree above the average, with an extraordinarily high mean daily range, higher indeed than any that has occurred during the past 45 years; a mean humidity unusually low; a mean rainfall slightly under the average, falling on one day less than the average; and an unwonted excess of westerly winds.

The mean barometric pressure was 29·958 inches, or 0·115 inch above the average. The excess was greater in the west than in the east, and very much greater in the south than in the north, the excesses being 0·067 inch

TABLE XLI.—Meteorology of Scotland for 1900, deduced from Observations made at 65 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1900.

in Shetland and 0.158 inch on the Solway. This distribution resulted in an excess of four days of westerly winds connected with anticyclones which frequently prevailed with their centres generally to the south-east and south. Thus these westerly winds were, especially in all eastern districts, very dry.

The mean temperature was $53^{\circ}8$, or $1^{\circ}0$ above the average, the days being $2^{\circ}3$ above and the nights $0^{\circ}4$ under the average, being the simple result of the strong insolation through the dry atmosphere which prevailed. The increase of temperature was pretty equally distributed over the country, except that it was a little greater over the more southern districts well sheltered from the westerly winds. The absolutely highest temperature was $83^{\circ}5$ on the 14th at Lairg, and the lowest $27^{\circ}2$ on the 25th at Montrose.

The mean rainfall was 3.33 inches, or 8 per cent. under the average. It was above the average in Shetland, Orkney, the West Coast from Cape Wrath to the Mull of Kintyre, the Outer Hebrides, Kinross and West Perthshire. The excess was 90 per cent. at Stornoway, and about 60 per cent. at Stromness, Cape Wrath, Stoerhead and Fladda. In all other districts the rainfall was under the average, the greatest deficiency being about 50 per cent. in the north-east of Aberdeenshire, at Montrose and in lower Tweeddale. Nearly all the rain fell from the 4th to the 10th and from the 18th to the 30th. The heaviest daily falls, being in many cases considerably above an inch, were recorded on the 26th, 27th, 29th and 30th. The largest rainfall at any of the stations was 16.96 inches on Ben Nevis, and the smallest 1.14 inch at Montrose, and 1.15 inch at Broomlands. The month was remarkable for the absence of thunder, the only instance reported being at Lednathie on the 18th. Aurora is reported from Ben Nevis on the 16th.

The weather of *October* was characterised by a mean barometric pressure

TABLE XLIII.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Diseases, in Eight of the Principal Towns of Scotland, during each Month of the Year 1900.

very nearly the average of the month, with a monthly range much under the average; a mean temperature a degree under the average; a mean daily range a degree above the average; a mean humidity the average; a very large mean rainfall, larger indeed than any that has occurred in October since 1874, falling on 4 days more than the average; and 7 days' excess of W.N.W. winds, of less than their usual force.

The mean barometric pressure was 29·804 inches, being very slightly less than the average. Pressure was, however, rather unequally distributed, being above the average to west of a line drawn from Dumfries to Stornoway, but under the average over all other districts of the country. The inevitable result of this higher relative pressure in the west, and lower in the east, was the unusual predominance of W.N.W. winds which prevailed 7 days more than the average.

The mean temperature was 45°·5, or one degree under the average, the days being 0°·4 and the nights 1°·5 under the average. Hence the low temperature was mainly occasioned by the greater cold of the nights during these W.N.W. winds. The greatest depression of the temperature occurred at eastern and inland stations to the north of the latitude of the Firth of Tay, being generally about a degree and a half; but to the south of this only about half a degree, and over considerable portions of these divisions of Scotland temperature exceeded the average about the third of a degree. The absolutely highest temperature was 66°·4 on the 18th at Lairg, and the lowest 21°·4 on the 16th at Kingussie.

The mean rainfall was 5·12 inches, or 27 per cent. above the average. Its distribution over the country was singularly unequal, being above the average except in a few scattered and limited districts in the Hebrides, in Aberdeenshire, and round the shores of the Moray Firth, where it was slightly under the average. The largest falls, exceeding the average by 50 per cent., occurred in Mid and East Lothians and at places in the

counties of Fife, Berwick, Ayr, Orkney, and Shetland. Much the largest proportion fell during the first half of the month, the heaviest falls being from the 4th to the 13th, and on the 17th and 31st.

The weather of *November* was characterised by a very low mean barometric pressure and a rather low monthly range; a mean temperature about a degree above the average, and a mean daily range nearly a degree under it; a mean humidity which has not been exceeded since 1864; an unusually large mean rainfall, falling on 4 days more than the average; and 3 days' excess of E.S.E. winds.

The mean barometric pressure was 29.696 inches, or 0.134 inch less than the average. North of the Grampians barometric pressure was relatively much lower than to the south. Thus in the counties of Wigtown and Berwick, pressure was 0.164 inch, and at North Unst only 0.040 inch under the averages. Thus gradients were formed for the south-easterly winds which prevailed.

The mean temperature was 42°·0, or 1°·1 above the average, the days being 0°·7 and the nights 1°·5 above the average, the higher temperature being thus occasioned by the warmer nights. Everywhere over the country the temperature was in excess of the average, the excess being greatest at eastern stations, and least in the west and in inland situations. The absolutely highest temperature was 64°·0 on the 1st at Loanhead, and the lowest 18°·0 on the 19th at Stobo Castle.

The mean rainfall was 4.92 inches, or 28 per cent. above the average. Everywhere south of the Grampians it was above the average, and round the Moray Firth from the Spey northwards, or over those districts open to the south-easterly and easterly winds; the greatest excess, fully 50 per cent. occurring from the Dee to the Tweed. In other districts it was slightly under the average. Little or no rain fell from the 17th to the 21st, but fell nearly every day during the rest of the month. Thunder was nearly altogether absent.

The weather of *December* was characterised by a very low mean barometric pressure, with a rather low monthly range; by a mean temperature higher than any recorded in December since 1865, with a mean

TABLE XLIV.—Monthly Deaths at Four Periods of Life in Eight of the Principal Towns of Scotland during the Year 1900, and Proportion at each Age in every Hundred Deaths per Month.

December .	966	195	898	617	2676	36.1	7.3	33.6	23.0	100
YEAR .	12,079	2,363	11,187	7,739	33,368	36.2	7.1	33.5	23.2	100

daily range slightly less than the average; a mean humidity a little under the average; a mean rainfall only exceeded since 1856 by the rainfall of December 1876, which was 7·57 inches as against 7·01 inches of 1900; this heavy rainfall fell on 25 days, being 8 days more than the average, and larger than any month during the past forty years; and 4 days' excess of westerly winds, blowing with a force far exceeding the average.

The mean barometric pressure was 29·620 inches, or 0·162 inch less than the average. The depression below the average was very much greater in the north than in the south, being 0·220 inch in Shetland, but only 0·134 inch at the Mull of Galloway. Thus very steep gradients were formed from south to north, occasioning the unusual prevalence of the westerly winds of the unusual strength as stated above.

The mean temperature was 42°·7, or 4°·7 above the average, the days being 4°·5 and the nights 4°·9 above the average. This extraordinarily high temperature was generally distributed over all parts of the country, with the exception that the excess was a little greater in inland situations, as happens with this type of weather. The absolutely highest temperature was 59°·0 on the 14th at Perth, and the lowest 22°·5 on the 4th at Lairg. The absence of very low temperature is a marked feature of the meteorology of this month.

The mean rainfall was 7·01 inches, or 69 per cent. above the average. The rainfall was very slightly under the average in the eastern portions of the counties of Aberdeen and Caithness, the greatest deficiency being 24 per cent. at Haddo House and 12 per cent. at Wick. Everywhere else it was above the average, the greatest excesses being, in percentages, 157 at Kingussie, 141 at Stronvar, 130 at North Esk Reservoir and Cromarty, and fully 100 per cent. at Wolfelee, Drumlanrig, Paisley, Roslin, Stirling, Fort Augustus, and Invergarry.

From Table XL. onward some idea may be gained regarding the connection there is between the general mortality, as also that from some special diseases, and the meteorological conditions of the successive months of the

TABLE XLV.—Months equalised to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in Eight of the Principal Towns during each Month of the Year 1900.

YEAR . . .	12,326	2,408	11,433	7,933	34,100	12,000

year, the information for which is chiefly furnished by returns made by observers in eight of the Principal Towns in Scotland.

Tables XL. and XLI. deal with Scotland as a whole, the former Table indicating the mean temperature for the year ($46^{\circ}4$) to be somewhat above that of the mean of a series of years (1881-1890) placed alongside for comparison. The mean temperature in the case of eight of the twelve months of 1900 is above that for those same during the ten years. The mean temperature of 1900 is a little below that of 1899.

From Table XLI. it is evident the heaviest mortality occurs during or immediately after the colder and more inclement months, being least so during the warmer, inasmuch as 11.30 per cent. of the deaths were registered during February, 10.33 per cent. during January, 10.10 per cent. during March, 8.82 per cent. during April, 8.11 per cent. during December, 7.98 per cent. during May, 7.76 per cent. during November, 7.59 per cent. during October, 7.16 per cent. during July, 7.09 per cent. during June, 6.95 per cent. during August, and 6.81 per cent. during September.

Table XLII., which refers to eight of the Principal Towns, indicates how Miasmatic diseases generally were most fatal during the first three and last months of the year, those with the lowest mean temperature, being at their minimum during the milder months. The special Miasmatics, or, as they may be called, Acutely Febrile diseases, which on this occasion may have caused this are Measles and Hooping-Cough, diseases which, besides from their own specific fatality, are on account of their sequelæ especially dangerous. Smallpox caused 42 deaths in those towns during the year, besides those (11) which occurred outwith them. Scarlet Fever deaths are most marked during the earlier and late months of the year, least so during the intervening. Diphtheria is, on the whole, most marked as a cause of death during the last four months of the year, and those from Fevers are more pronounced during the latter five months than during those of spring and summer. Of the deaths from Plague 7 are registered during September and 2 during October.

Diarrhoeal disease is, as usual, most in evidence during the months of July, August, September, and October.

Phthisis, as a cause of death, is more marked during the first six months than during the last six, but each month it is large, the smallest number registered being 203 in November.

The more acute diseases of the Respiratory Organs, as Bronchitis and Pneumonia, attain their maximum mortality during January, February, and March, their minimum being during July and August.

Deaths from diseases of the Circulatory Organs are registered in largest numbers during January, February, March, and May, as is also the case with those from disease of the Brain and Nervous System.

The deaths from Old Age in those towns bulk most largely during the cold months of January, February, March, April, and December.

Tables XLIV. and XLV. are intended to show the monthly comparative mortality at four periods of life during 1900 in eight of the Principal Towns. Of the total 33,368 deaths in these towns 12,079, or 36.2 per cent. of them, were of children 0.5 years of age; 2363, or 7.1 per cent., were at ages 5-20 years; 11,187, or 33.5 per cent., were between 20-60 years; and 7739, or 23.2 per cent., were at ages over 60.

Children between 0.5 years of age succumbed in largest number during January, February, March, October, and November, those months during

which Miasmatics were particularly fatal, the smallest number during May and June.

Among Adolescents (5-20 years) deaths were more frequent during January, March, May, and July, months during which diseases of the Respiratory Organs and Phthisis were numerous. June and November show the fewest deaths at this age.

Adults, those between 20-60 years, suffered most during January, February, and March, inclement months, and those in which many deaths from Phthisis, Respiratory affections, and diseases of the Heart and Brain are caused.

Among the Aged, over 60 years of age, the heaviest mortality is during the early and late months of the year, and the lightest during the milder months of July, August, and September.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, 8th September 1902.

N.B.—Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.

An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situated, which comprise more, or parts of more, than one Parish. The component parts of these Districts will be found at page 474.

A dagger "†" is prefixed to those Districts which consist of only a part of the Civil Parish of the same name.

135	Elgin	Elgin, and parts of New Spynie, and St Andrews-Lhanbryde.
152	Enzie	Parts of Bellie and Rathven.
155b	Gleninnes	Parts of Aberlour and Mortlach.
167	Seafeld	Parts of Cullen and Rathven.
171b	Ardallie	Parts of Cruden, Ellon, Longside, and Old Deer.
210b	Kinninmouth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick, Tullich, and Glengairn.
222b	Milbrenx	Parts of Fyvie and Monquhitter.
227b	New Pitsligo	Parts of Aburdour, New Deer, Strichen, and Tyrie.
231	Peterculter	(1) Parts of City Parish of Aberdeen and Peterculter; (2) Remainder of Peterculter.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
249b	Ythan Wells	Parts of Auchterless and Forgue.
266	Nigg	Nigg, and part of City Parish of Aberdeen.
282	Dundee	Dundee, and parts of Liff, Benvie and Invergowie, and Mains and Strathmartine.
294b	Kilry	Parts of Glenisla and Lintrathen.
324	Aberfeldy	Parts of Dull, Kenmore, and Logierait.
330	Achtergaven	Parts of Auchtergaven and Logiealmond.
331	Balquhider	Balquhider, and part of Comrie.
344	Dowally	Part of Dunkeld and Dowally.
349	Dunkeld	Part of Dunkeld and Dowally.
355b	Foss	Parts of Blair-Athol and Dull.
361	Killin	Parts of Kenmore and Killin.
375	Logiealmond	Parts of Logiealmond, Little Dunkeld, and Methven.
379	Meigle	Meigle, and part of Coupar-Angus.
386b	Persie	Parts of Alyth, Blairgowrie, and Kirkmichael.
387	Perth	Perth, and part of Kinnoull.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenantry	Parts of Blair-Athol and Moulin.
402	Anstruther-Easter	Anstruther-Easter, and part of Kilrenny.
417	Crail	Part of Crail and May Island.
423	Dunbog	Dunbog, and part of Flisk.
425	Dunino	Dunino, and part of Crail.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
437b	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
488	St Ninians	Parts of St. Ninians and Stirling.
490	Stirling	Parts of St. Ninians and Stirling.
496	Dumbarton	Dumbarton, and part of Cardross.
504	Ardchattan	Part of Ardchattan and Muckairn.
505	Ardnamurchan	(1) Part of Ardnarmurchan and of Arisaig and Moldart.
506	Ballachulish, etc.	Parts of Kilmallie and Ardgour.
509	Cumlodden and Minard	Parts of Glassary and Glenaray.
513	Inveraray	Inveraray, and part of Glenaray.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan, etc.	(1) Parts of Kilchrenan and Dalavich, and Glenorchy and Inishail; (2) Remainder of Kilchrenan and Dalavich.
520	Kilmallie	Parts of Kilmallie and Ardgour.
525	Lismore	Lismore and Appin, and part of Ardgour.
526	Lochgilthead	Parts of Glassary and South Knapdale.
529	Muckairn	Parts of Ardchattan and Muckairn, and Glenorchy and Inishail.
535	Tarbert	Parts of Kilmallie and Muckairn, and Glenorchy and Inishail.
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
538	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelve	Part of Pennygown and Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and Pennygown and Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
550	Torosay	Part of Pennygown and Torosay.
556	Lochransa	Parts of Kilbride and Kilmory.
559b	Bridge-of-Weir,	Parts of Houston and Killellan, and Kilbarchan.
572	Neilston	(1) Part of Neilston; (2) Remainder of Neilston, and part of Paisley.
576	Ardrossan	(1) Parts of Ardrossan and West Kilbride; (2) Remainder of Ardrossan.
584b	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
610b	Padua	Parts of Dalmellington, Dalrymple, Kirkmichael, and Straiton.
622	Barony	Part of Glasgow.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	Gorbals, and parts of Glasgow and Govan.

CONSTITUTION OF THE DISTRICTS—*continued.*

No.	Districts.	Component Parts (Parishes).
685	Edinburgh	City Parish of Edinburgh, and parts of Duddingston and Liberton.
695 <i>b</i>	New Craighall	Parts of Inveresk and Liberton.
698 <i>b</i>	Stobhill	Parts of Borthwick, Cockpen, and Newbattle.
774 <i>a</i>	Caddonfoot	Caddonfoot, and part of Innerleithen.
787 <i>b</i>	Edgerston	Parts of Jedburgh and Southdean.
913 <i>b</i>	Brydekirk	Parts of Annan, Cummertrees, and Hoddum.
830	Holywood	Holywood, and part of Terregles.
853 <i>b</i>	Wanlockhead	Part of Sanquhar.

				Bridgeton,	644	Catcart,	560	Crawfordjohn,	63
				Brodick,	553	Catrine,	613	Creich (Fife),	41
				Broughton,	758				

* The actual number of Districts is 1072—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 6 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place compound names in the order in which they are pronounced.

Craich (Sutherland), 46	Dunbarney, 347	Findo-Gask, 352	Graitney (or Gretna), 827	Keiss, 87
Orichton, 681	Dunblane and Lecropt, 348	Fintray (Aberd.), 193	Grange, 156	Keith, 159

1904.

Ed. 1923.] Price 2s. 7d.

REPORT.

TO THE RIGHT HONOURABLE
ANDREW GRAHAM MURRAY, K.C., M.P.,

His Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 2nd February, 1904.

SIR,

I HAD the honour in 1902, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to Lord Balfour of Burleigh, your predecessor in office, as His Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1901, along with the usual Explanation and Commentary.

At the same time my Thirty-seventh Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1901).

I have the honour to be,

SIR,

Your most obedient Servant.

STAIR AGNEW,

Registrar-General.

CONTENTS.

REPORT
TO THE
REGISTRAR-GENERAL.

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR-CUNYNGHAME, M.D., F.R.S.E.

SIR,

The population of Scotland as enumerated on the Census day, 31st March 1901, was 4,472,103—the males numbering 2,173,755, the females 2,298,348. At the previous Census, 1891, the population was 4,025,647—the males 1,942,717, the females 2,082,930. It is from these numbers all

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1901, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.

estimates of population made to the middle of each year are obtained for the next decennium, and which are used in the various reports issued from this office, so that at 30th June 1901 the total population is considered to be 4,483,880—the males being 2,179,870, the females 2,304,010.

The inhabitants of the five primary Registration Districts into which the whole country is divided are as estimated to 30th June 1901 as follows:—The Principal Town Districts are, both sexes, 1,958,005—the males 942,865, the females 1,015,140; the Large Town Districts have a total of 580,537—males 283,959, females 296,578; the Small Town Districts, both sexes number 899,958—males 439,191, females 460,767; the Mainland Rural Districts total to 928,875—the males 458,867, the females 470,008; and in the Insular Rural Districts the conjoined sexes number 116,505—males 54,988 females, 61,517 (Table II.).

A change is now made regarding the population of a Principal Town, viz., a rise from 25,000 to 30,000 as a minimum, and there are in Scotland fifteen towns with populations of 30,000 and over, which fall under the designation of Principal Town.

BIRTHS.

The number of births registered throughout Scotland during the year is 132,192, giving a birth-rate of 2·95 per cent. or 295 per ten thousand of the population, which is the lowest rate as yet noted in these reports. The mean annual birth-rate for the last ten years is 302 in like proportion. The births exceed the deaths during the year by 52,085.

Of the total births 8359 are illegitimate, the lowest number since 1855, and they form 6·32 per cent. of the total births.

The number of male infants born during the year is 67,753 and of female 64,439, the former exceeding the latter by 3,314.

The births occur in the five Registration Districts as follows:—In the Principal Town Districts the total is 60,012—males 30,760, females 29,252, at a rate equal to 3·07 per 100 of the population of the same as estimated; in the Large Town Districts they are 18,310—males 9,407, females 8,903, giving a birth-rate of 3·15 per cent.; in the Small Town Districts they number 27,017—males 13,807, females 13,210, a birth-rate of 3·00 per cent.; in the Mainland Rural Districts the sexes together are 24,312—males

TABLE II.—Population of Scotland, in its Five Groups of Districts, by the Censuses of 1891 and 1901, and estimated to the middle of 1901.

From 1855–1900 Principal Towns had over 25,000 inhabitants, and Large Towns from 10,000 to 25,000; in 1901 Principal Towns have over 30,000 of population, and Large Towns, 10,000 to 30,000. The Small Towns from 3000 to 10,000 inhabitants from 1855 to 1870, but from 1871 onwards the Small Towns have from 2000 to 10,000 of population.

they are 1,572—males 800, females 772, together equivalent to 5·82 per cent. of all; in the Mainland Rural Districts they are 2,103—males 1,086, females 1,017, and equal to 8·65 per cent. of all; and in the Insular Rural Districts they are 136—males 81, females 55, and equal to 5·35 per cent. of the total births in the same. In other words, 1 child in every 16 born in Scotland was illegitimate; in the Principal Town Districts it was the same, 1 in 16; in the Large Town Districts 1 in every 20; in the Small Town Districts 1 in every 17; in the Mainland Rural Districts 1 in every 12; and in the Insular Rural Districts 1 in every 19.

Table V. affords like information regarding the principal towns in Scotland. Thus, the highest birth-rate occurred in Motherwell, 4·161 per cent., followed by Hamilton with one of 4·133 per cent.; Coatbridge, 3·735

TABLE IV.—Percentage of Births, Deaths, and Marriages in the Five Groups of Districts of Scotland, to the Population during each of the Years 1855–1901.

YEARS.	Principal Town.			Large Town.			Small Town.			Mainland-Rural.			Insular-Rural.

per cent.; Partick, 3·576 per cent.; Govan, 3·570 per cent.; Kilmarnock, 3·205 per cent.; Glasgow and Leith each 3·166 per cent.; Aberdeen, 3·101 per cent.; Greenock, 2·984 per cent.; Paisley, 2·957 per cent.; Dundee, 2·910 per cent.; Kirkcaldy, 2·766 per cent.; Edinburgh, 2·490 per cent.; and Perth, 2·328 per cent. The rate of illegitimate births to the total is in each town as follows:—9·18 per cent. in Dundee; 8·32 per cent. in Aberdeen; 6·99 per cent. in Edinburgh; 6·39 per cent. in Perth; 6·32 per cent. in Glasgow; 4·61 per cent. in Greenock; 4·55 per cent. in Leith; 4·54 per cent. in Paisley; 4·09 per cent. in Kilmarnock; 4·00 per cent. in Govan; 3·59 per cent. in Kirkcaldy and in Hamilton; 3·16 per cent. in Partick; 2·52 per cent. in Coatbridge; and 2·34 per cent. in Motherwell.

Table VI. shows the total births and the rate of the same in each county of Scotland, as also that of the illegitimate births. Of the latter the highest rate occurs in Wigtown, where 13·95 per cent. of the total births are of this nature, the lowest rate, 3·30 per cent., falling in Clackmannan. Those counties which show the highest rates are Kirkcudbright, 10·09 per cent.; Caithness, 10·10 per cent.; Peebles, 10·60 per cent.; Aberdeen, 11·34 per cent.; Dumfries, 11·53 per cent.; Banff, 12·85 per cent.; Elgin, 12·95 per cent.; and Wigtown, 13·95 per cent. In 14 counties this rate is under that for Scotland, which is 6·32 per cent., the lowest rates occurring in Shetland, 3·69 per cent.; Dumbarton, 3·42 per cent.; and Clackmannan, 3·30 per cent.

Table VIa. shows among other things the number of illegitimate children born during 1901, and the percentage of the same to the estimated number of unmarried women and widows between 15 and 45 years of age in Scotland, in each county, and in each principal town.

Of the total births registered throughout Scotland during the year, 67,753 are of the male sex, and 64,439 of the female, so that there were 3,314 more of the former than of the latter. The proportion of males born to females is as 105·1 is to 100. Among the legitimate births alone it is the same, and among the illegitimate as 106·0 is to 100.

TABLE V.—Number of Births, Deaths, and Marriages in the Principal Towns of Scotland during 1901, and their Proportion to the Estimated Population; also the Illegitimate Births, and their Proportion to the Total Births.

giving a marriage rate of 70·00 per ten thousand of the population, the lowest rate since 1895. The mean marriage rate for the last ten years is 70 per ten thousand of population.

The rate varies in the five districts into which the whole country is primarily divided for registration purposes. Thus in the Principal Town Districts it is 85·01 per ten thousand of the inhabitants of the same, in the Large Town Districts it is 70·11, in the Small Town Districts it is 63·24, in the Mainland Rural Districts it is 48·87, and in the Insular Rural Districts it is 37·94 per ten thousand as estimated, in each case the rate being lower than that for last year with the exception of the Insular Rural Districts, where it is slightly higher.

In Table VI. the rate is given for each county, varying from 82·53 per ten thousand of population, the highest, in Lanark, to 29·40, the lowest in Sutherland. In five counties the rate is above the mean for Scotland, viz., in Lanark with 82·53 as just stated, Edinburgh with 82·26, Aberdeen with 71·92, Ayr with 71·63, and Forfar with 70·51. The lowest rates occur in Inverness, 49·26 in like ratio, in Peebles 48·53, in Bute 40·97, in Ross and Cromarty 37·57, in Argyll 35·12, and in Sutherland 29·40.

Table V. gives the number of marriages and the proportions corresponding thereto in each of the principal towns of Scotland. The rate is highest in Glasgow, 92·6 per ten thousand of its inhabitants, followed by Edinburgh with one of 91·2, Kilmarnock with one of 90·0, Aberdeen with one of 88·8, Perth with one of 79·8, Coatbridge with one of 79·6, Dundee with one of 78·6, Paisley with one of 76·9, Greenock with one of 73·8,

Insular-Rural	2·181	5·35	99·5	97·3	147·3	76·0	...
SCOTLAND . .	2·948	6·32	105·1	105·1	106·0	84·4	10048

Hamilton with one of 73·3, Leith with one of 72·6, Kirkcaldy with one of 72·4, Motherwell with one of 68·2, Partick with one of 67·3, and Govan with one of 53·7.

The fertility of marriages is computed in the usual manner. The number of marriages registered during 1895 is 28,422, and the legitimate births during 1901, the present year, are 123,833, so that $\frac{123833}{28422}$ gives 4·36 as the average fertility of each marriage, or 436 children were born to every 100 marriages.

Tables X. and XIII. show the number of marriages as performed during the year in Scotland by the clergy of the various denominations, as also the proportions corresponding thereto. Of the whole 31,387 marriages, 14,167 or 45·14 per cent. were celebrated by ministers of the Established Church, 8,669 or 27·62 per cent. by those of the United Free Church, 3,184 or 10·14 per cent. by those of the Roman Catholic Church, 942 or 3·00 per cent. by those of the Episcopal Church, 2,473 or 7·88 per cent. by clergy of other denominations, while 1,952 or 6·22 per cent. of the whole were of an irregular nature, the largest number and rate that has yet been reported.

Of the total marriages registered in Scotland since their registration was made law it is found that 45·43 per cent. have been solemnised in accordance with the rites of the Established Church of Scotland, 33·67 per cent. in accordance with those of the Free and United Presbyterian Churches, now combined as the United Free Church, 9·47 per cent. with those of the Roman Catholic Church, 2·57 per cent. with those of the Episcopal Church; in 6·50 per cent. the officiating clergymen were of some other denomination than those mentioned, in 0·19 per cent. the denomination was not stated, and in 2·17 per cent. the marriages were irregular in character.

Table XI. indicates the number and percentage of marriages registered in the counties and principal towns as solemnised in accordance with the forms of the various religious denominations. In each of the counties of Kincardine, Kinross, Haddington, Berwick, Peebles, Roxburgh, Dumfries, Kirkcudbright, and Wigtown over 60·00 per cent. of the marriages were solemnised by ministers of the Established Church, while the corresponding rate in Nairn is 17·78 per cent. Marriages performed by ministers of the United Free Church are most prominent in the counties of Orkney with 59·53 per cent., and Nairn with 60·00 per cent., while in three, Kincardine, Kirkcudbright, and Wigtown, the rate is under 20·00 per cent. Marriages

Marriages performed by clergy of other denominations are most to be noted in Shetland, Caithness, Sutherland, Ross and Cromarty, and Inverness, there being none in Kinross. Irregular marriages show the highest rates in Elgin 4·76 per cent., Bute 5·19 per cent., Lanark 9·68 per cent., and Edinburgh 14·71 per cent.

Among the principal towns it is seen that in Aberdeen, Leith, Kilmarnock, and Kirkcaldy over 50·00 per cent. of the marriages registered therein were celebrated by clergy of the Established Church, the lowest

in Edinburgh with 6·42 per cent., Motherwell with 7·14 per cent., and Dundee with 9·54 per cent. Marriages performed by clergy of other denominations than the above are in greatest ratio in Dundee 11·27 per cent., Partick 11·38 per cent., Govan 13·32 per cent., and Motherwell 16·67 per cent. Irregular marriages are most to be noted in Glasgow, where 13·68 per cent. of all are of this nature, and 20·04 per cent. in Edinburgh. They are at a minimum in Paisley, 0·82 per cent., there being none in Kirkcaldy.

Table XIV. gives at a series of ages the number of those who married during the year. Of the total celebrations 1,927 or 6·1 per cent. of the husbands, and 5,788 or 18·4 per cent. of the wives, were under 21 years of age on the occasion. Two of the brides were between 15-16 years of age, and 63 between 16-17, while 16 males between 16-18 years of age saw fit to take to themselves wives. Twelve of the husbands were between the ages of 75-90 years.

Table XV. gives the percentage of men and women at different ages who contracted marriage in Scotland and in each of its groups of districts during 1901. Thus in Scotland 2·53 in every 100 marriages among the males took place between the ages of 15-20 years, the corresponding ratio among the females being 10·89. These proportions are exceeded in the case of the males in the Principal Town Districts, and in that of the females in the Principal, Large, and Small Town Districts. Between 20-25 years 33·89 per cent. of the marriages of males and 42·77 per cent. of the females occurred, exceeded in the case of both sexes in the Large and Small Town Districts. Between 25-30 years 34·01 per cent. of the men and 27·19 per cent. of the women married, exceeded in the case of the males in the Large Town Districts, Small Town Districts, and Mainland Rural Districts, and

of the females in the Mainland and Insular Rural Districts. Between 30-35 years 14·42 per cent. of the men and 10·16 per cent. of the women married, exceeded in the case of the former in the Principal Town Districts and of both sexes in the two Rural Districts. Between 35-40 years 6·82 per cent. of the marriages of the men and 4·67 per cent. of those of the women took place, ratios exceeded in the case of the men in the Principal Town and both Rural Districts, and of the women in the Principal Town and Insular Rural Districts. Between 40-50 years 5·76 per cent. of the men and 3·41 per cent. of the women married. At 50 years of age and over 2·57 in every 100 marriages of the males occurred in Scotland, 0·91 being the corresponding proportion among the females.

During the year 27,702 bachelors married spinsters, 892 bachelors espoused widows, 1,998 widowers mated with spinsters, and 794 widowers with widows; or 88·26 per cent. of the marriages were between bachelors and spinsters, 2·84 per cent. between bachelors and widows, 6·37 per cent. between widowers and spinsters, and 2·53 per cent. between widowers and widows.

Table XIX. among other things indicates the percentage of those married during the year who signed the register or merely made use of their *mark* instead. Thus in Scotland 98·03 per cent. of the men who married and 97·33 per cent. of the women signed their names on the marriage register, leaving 1·97 per cent. of the former and 2·67 of the latter who were satisfied with their *mark*. These proportions vary considerably in the five districts: in the Principal Town Districts 97·94 per cent. of the husbands and 97·15 per cent. of the wives signed, leaving 2·06 per cent. and 2·85 per cent. respectively who did not do so; in the Large Town Districts the male signatures are 98·08 per cent., the female 97·44 per cent., leaving 1·92 per cent. and 2·56 per cent. as using *mark*; in the Small Town Districts the

ratios are 97·72 per cent. and 97·07 per cent. signing, 2·28 per cent. and 2·93 per cent. not; in the Mainland Rural Districts 99·23 per cent. of the men and 99·05 per cent. of the women signed, leaving 0·77 per cent. and 0·95 per cent. apparently unable to do so; and in the Insular Rural Districts 92·76 per cent. of the husbands and 88·69 per cent. of the wives signed, leaving 7·24 per cent. and 11·31 per cent. respectively who did not do so.

In eight counties a larger proportion of the husbands made use of *mark* than is the case for Scotland generally, in six counties the wives did likewise. In Nairn, Berwick, Peebles, Selkirk, and Kirkcudbright all of both sexes signed, while all the males in Banff and all the females in Kinross and Haddington did the same.

99.00 per cent. of the wives signed, leaving 0.72 per cent. and 1.00 per cent. to use *mark*. In Glasgow 97.02 per cent. of the men and 95.89 per cent. of the women signed, leaving 2.98 per cent. and 4.11 per cent. respectively who did not do so.

15.11 per cent. of the marriages in Scotland were registered during June, 13.01 per cent. during July, 12.98 per cent. during December, 11.56 per cent. during January, 8.12 per cent. during April, 7.27 per cent. during September, 6.36 per cent. during November, 6.09 per cent. during October, 6.05 per cent. during August, 5.35 per cent. during March, 5.22 per cent. during February, and 2.88 per cent. during May.

The marriage rate per ten thousand of the estimated population in the undernoted European States for 1901 is as follows:—60 in Sweden, 67 in Norway, 72 in Denmark, 76 in Switzerland, 77 in the Netherlands, 78 in France, 82 in Austria and in the German Empire, 83 in Prussia and in Belgium, 84 in Spain, and 87 in Hungary.

DEATHS.

80,107 deaths were registered in Scotland during the year 1901, which gives a mortality rate of 179 in every ten thousand of the inhabitants, or one death in every 56 of the population; 40,213 of these are males, and 39,894 females. The mortality rate among the males alone is for the present year 185, and among the females 173 per ten thousand of the sexes respectively. The mean death-rate for the last ten years is 185 per ten thousand of the inhabitants.

Tables XX. and XXI. give the number of deaths of each sex and the mortality rates corresponding thereto in each of the five primary Registration Districts. From the former Table the number of deaths registered in the Principal Town Districts is 38,756, the rate being 198 in every ten thousand of the population; the male deaths number 19,756, and the female 19,000. In the Large Town Districts the deaths total to 10,247, equal to 177 per ten thousand of the estimated population; the male deaths are 5,120, the female 5,127. In the Small Town Districts they are 14,960, giving a mortality rate of 166 in each ten thousand of population; the male deaths are 7,417, the female 7,543. In the Mainland Rural Districts there are 14,349 deaths, equal to 154 in every ten thousand of the inhabitants; the male deaths are 7,088, the female 7,261. And in the Insular Rural Districts the deaths are 1,795, or 154 per ten thousand of the inhabitants; the male deaths are 832, the female 963. The mortality rate in the case of both sexes in the Principal Town Districts is above the corresponding for Scotland; the rate of both sexes is the same in the Mainland Rural Districts; and in the Insular Districts the female rate is higher than that of the male.

In Tables XXII. and XXIII. the total mortality and the death-rate are stated for each of the fifteen principal towns of Scotland. In Glasgow the deaths registered during the year amounted to 16,190, which represents a mortality rate of 21 per thousand of the population; in Edinburgh the deaths numbered 6,173, giving a rate of 19 per thousand; in Dundee the mortality was 3,412, and the death-rate 21 per thousand; in Aberdeen 2,813 deaths were recorded, being in the proportion of 18 per thousand; in Govan the deaths numbered 1,320, equal to a rate of 17 per thousand; in Paisley 1,486 deaths occurred, giving a rate of 19 per thousand; in Leith the mortality was 1,373, being in the proportion of 18 per thousand; in Greenock the mortality was 1,328, and the rate 19; in Partick it was

respectively 957 and 17; in Coatbridge there were 828 deaths, at the rate of 22 per thousand; in Kilmarnock the deaths were 654, equal to 19 per thousand; in Kirkcaldy 544 deaths were registered, the rate being 16 per thousand; in Perth the deaths amounted to 570, equivalent to 17 per thousand; in Hamilton 575 deaths occurred, representing a rate of 17 per thousand; and in Motherwell a total mortality of 533 was at the rate of 17 per thousand of the population.

A summary of the ages, at the Censuses of 1891 and 1901, of the people in the five groups of registration districts is given in Appendix Tables 6 and 7. Table XXIV. gives the number of deaths at various ages in Scotland and each of the five groups into which the registration districts are classified; and Table XXV. shows the proportion which the deaths at each period of life bear to the estimated population at a similar age. In Scotland the mortality among male infants under one year of age was at

the rate of 16·401 per cent., and among female infants at the rate of 13·312 per cent. The rates are above those for Scotland in the Principal and in the Large Town Districts, but below in the other groups. At this age the rate of mortality of males exceeded that of females in Scotland and in all the districts except the Insular Rural.

The proportion of children who died in their second year was 5·572 per cent. of males and 5·184 per cent. of females. Only in the Principal Town Districts are the proportions above those for Scotland, being 8·026 and 7·172 per cent. of males and females respectively. In the Small Town Districts alone the mortality of male children between 1 and 2 years old was less than that recorded among females of the same age.

In the third year of life males died at the rate of 2·026 per cent., and females at the rate of 1·989 per cent. The Principal Town Districts showed the highest rate of mortality at this age, and the Insular Rural Districts the lowest.

Between the ages of 3 and 4 the rate of mortality among males was 1·103 per cent., and among females 1·237. The mortality of both sexes in the Principal Town Districts and of males in the Large Town Districts exceeded that for Scotland. At this age the lowest death-rate among males is found in the Insular Rural Districts, and among females in the Mainland Rural.

In Scotland 0·857 per cent. of males and 0·838 per cent. of females succumbed in the fifth year of life. The highest rate of mortality was in the Principal Town Districts, the lowest in the two Rural groups. At this period of life deaths were more numerous among males than among females in the Principal Town and in the Mainland Rural Districts, as well as in Scotland as a whole.

For males at all ages under 5 the mortality for every hundred of population was 5·424; for females the corresponding rate was 4·668. The highest proportions were in the Principal Town Districts, the percentages being 6·971 for males and 5·867 for females; and the lowest in the Insular Rural,

with percentages of 1·959 and 1·982 for males and females respectively. Except in the Insular Rural Districts, the relative mortality in the first quinquennial period of life was greater among males than among females. At ages between 5 and 10 the death-rate was 0·444 per cent. of the male population, and 0·502 per cent. of the female. The rate for each sex is exceeded in the Principal Town Districts, and for females in the Large Town Districts. At the next quinquennial period (10-15) the lowest rate of mortality is found, that for males being 0·281 per cent., and for females 0·328. The mortality of females at this period everywhere exceeded that of males. At ages 15-20 the rate increased in the case of males to 0·452 per cent., and in that of females to 0·485. In the Principal Town and Insular Rural Districts deaths occurred in greater proportion among males than among females. The deaths at ages 20-30 were in the ratio of 0·634 and 0·611 to every hundred of the male and the female population respectively. The highest rates at this period are found in the Insular Rural Districts, being 0·890 for males and 0·860 for females. In the following decennial period (30-40) the mortality among males was in the proportion of 0·906 per cent., and among females 0·871. Only in the Principal Towns were the rates in excess of those for the country generally. At ages over 40 the death-rate increases at each successive period; and generally the rates in the Urban districts are greater than those prevailing in the Rural groups.

Table XXVIII. gives the number of deaths at different periods of life in each of the principal towns of Scotland, and Table XXIX. the ratios of such deaths to the estimated population at the same age. The mortality of infants under twelve months ranged from 13·93 per cent. in Paisley, 14·16 in Perth, and 14·38 in Greenock, to 20·19 in Coatbridge and 21·28 in Dundee.

The highest death-rates among children in their second year were 8·13 per cent. in Dundee and 9·12 in Glasgow; the lowest, 3·75 in Aberdeen and 2·28 in Perth.

TABLE XXIV.—Ages of Males and Females who Died in Scotland, and in each of its Groups of Districts, during the Year 1901.

At all ages under 5 years the mortality was proportionately greatest in Dundee and Coatbridge, the rates being 7·28 and 7·29 per cent. respectively, and least in Perth, the rate being 3·90 per cent. The percentages in the other towns were:—5·15 in Aberdeen, 5·20 in Paisley, 5·30 in Kirkecaldy, 5·31 in Hamilton, 5·34 in Kilmarnock, 5·69 in Leith, 5·73 in Greenock, 5·85 in Motherwell, 5·93 in Govan, 6·37 in Edinburgh, 6·61 in Partick, and 7·07 in Glasgow.

Table XXVI. shows the proportion of deaths at a series of ages to the total deaths, in Scotland and in each of the groups of registration

TABLE XXVI.—Percentage of Deaths at each Age to the Total Deaths in 1901.

[illegible]

districts. Of all males whose deaths were registered during the year, 23·73 per cent. were under 1 year of age, and of all females 18·95 per cent. The proportions in each of the Urban districts were in excess of those for Scotland. Of the males who died, 36·30 per cent. were under 5 years, and of the females 31·04 per cent.—proportions which are exceeded in the Principal and in the Large Town Districts.

TABLE XXVII.—Percentage of Deaths at each Age to the Total Deaths in Scotland, for the ten years 1891-1900, and the Mean of the same. Also the Percentage for 1901.

[illegible][illegible]

The death-rate per ten thousand of the population in the undermentioned European States during 1901 was as follows:—149 in Norway, 158 in Denmark, 160 in Sweden, 171 in Belgium, 172 in the Netherlands, 180 in Switzerland, 201 in France, 205 in Prussia, 207 in the German Empire, 220 in Italy, 242 in Austria, 254 in Hungary, and 276 in Spain.

CAUSES OF DEATH.

A modified classification of causes of death has been adopted in this Report, and a list of the individual diseases which are differently grouped in the new nomenclature and in that used in previous Reports will be found on pages xxxviii. and xxxix.

Of the 80,107 deaths registered during the year, 725 resulted from unspecified causes.

TABLE XXVIII.—Deaths at different Ages in the Principal Towns of Scotland during the Year 1901.

Table XXX. gives the number of deaths from the principal epidemic and from certain other diseases at five periods of life, and also the proportion which the deaths at various ages bear to the total mortality. Of the 278 deaths from Small-pox registered during the year, 36 or 12·9 per cent. were of children under 5 years, 9 were of persons between 5 and 15, 220 or 79·1 per cent. of persons between 15 and 60, and 13 of persons over 60. Of the 1,655 deaths which resulted from Measles, 1,528 or 92·3 per cent. were of children under 5, 82 or 5·0 per cent. were of children between 5 and 10, 17 were of persons between 10 and 15, 26 between 15 and 60, and 2 over 60 years. Of the 595 persons who died from Scarlet Fever, 337 or 56·6 per cent. were under 5 years of age, 167 or 28·1 were between 5 and 10, 43 or 7·2 between 10 and 15, and 48 or 8·1 over 15. From Hooping-cough there resulted 2,751 deaths, 2,655 or 96·5 per cent. occurring during the first 5 years of life, 91 or 3·3 per cent. at ages 5-10, and 5 at ages over 10. Diphtheria accounted for 739 deaths, of which 71·5 per cent. occurred at ages under 5, 21·2 per cent. at the next quinquennial period, and 7·3 per cent. at ages over 10. From Influenza there resulted 689 deaths, 77 or 11·2 per cent. being of children under 5, 22 or 3·2 per cent. of persons aged 5-15, 222 or 32·2 per cent. of persons aged 15-60, and 368 or 53·4 per cent. of persons over 60. The Continued Fevers caused in all 777 deaths; 30 occurred at ages under 5, 61 between 5 and 10, 61 between 10 and 15, 595 or 76·6 per cent. between 15 and 60, and 30 at ages over 60. Typhus caused 35 deaths, 30 of which were of persons between 15 and 60 years of age. Of the 717 persons whose deaths were attributed to Enteric Fever, 22 or 3·1 per cent. were under 5 years, 59 or 8·2 between 5 and 10, 55 or 7·7 between 10 and 15, 556 or 77·5 between 15 and 60, and 25 or 3·5 over 60 years. Cerebro-spinal Fever caused 5 deaths, and Simple Continued Fever 20. Of the 2,210 deaths from Diarrhoea, 1,765 or 79·8 per cent. occurred among children under 5 years, and 267 or 12·1 per cent. among persons over 60. Syphilis accounted for 206 deaths, 166 or 80·6 per cent. being of children under 5, and 32 or 15·5 of persons between 15 and 60 years. To Erysipelas were due 249 deaths, 79 or 31·7 per cent. being of children under 5, 95 or 38·2 per cent. of persons between 15 and 60, and 71 or 28·5 of persons aged 60 years and upwards. Of the 139 deaths attributed to Croup, 87·1 per cent. took place at ages under 5 years, and the remainder in the next quinquennial period.

An indication of the relative fatality of the principal epidemic and other diseases in the principal towns of Scotland is given in Tables XXXIII. and XXXIV. Small-pox caused 200 deaths in Glasgow, 3 in Paisley, and 1 each in Aberdeen, Govan, and Greenock.

The highest rates from Measles per hundred thousand of the population were 76 in Kilmarnock, 66 in Glasgow and in Leith, and 62 in Dundee.

The mortality from Scarlet Fever was at the rate of 47 per hundred thousand of population in Kilmarnock, 43 in Greenock, 35 in Coatbridge, and 34 in Hamilton.

The towns of Aberdeen and Edinburgh suffered most severely from Influenza, the death-rate per hundred thousand inhabitants being 29 and 18 respectively.

From Hooping-cough the highest rates were 149 per hundred thousand in Coatbridge, 137 in Partick, 114 in Glasgow, and 101 in Dundee.

The mortality from Diphtheria in Coatbridge was equal to a rate of 27 per hundred thousand persons; in Hamilton, 25; in Edinburgh, 23; and in Kirkcaldy, 20.

Typhus caused 11 deaths in Glasgow, 2 in Edinburgh, and 3 in Dundee. Enteric Fever was most fatal in Kilmarnock, where the rate was 47 per hundred thousand; and in Paisley, where the rate was 44. Cerebro-spinal

Diseases which are differently grouped in the Old and in the New List of Causes of Death.

NAME OF DISEASE.	CLASSIFICATION IN OLD TABLES.	ARRANGEMENT IN NEW LIST.
Ague	*Malarial diseases	†Malaria.
Apoplexy	*Diseases of nervous system	*Diseases of blood vessels.
Appendicitis	Enteritis	†Diseases of digestive system.
Ascites	*Diseases of digestive system	Referred to cause, if known.
Brain Tumour	Diseases of nervous system	†Referred to cause, if known.
Carbuncle	*Diseases of integumentary system	*General diseases.
Carcinoma	Classed with cancer	†Distinguished from cancer.
Cerebral Hæmorrhage	Apoplexy	†Diseases of blood vessels.
Cleft Palate	*Cleft palate	With congenital defects.
Continued Fever	*Simple and ill-defined fever	†Pyrexia of uncertain origin.
Cyanosis	*Cyanosis	With congenital defects.
Diarrhœa	Classed with dysentery	*Distinguished from dysentery.
Dilatation of Heart	Diseases of circulatory system	†Among cardiac diseases.
Dyspepsia	*Dyspepsia	{ In infants, referred to want of breast milk. In adults, referred to cause, if known; if not, to diseases of digestive system.
Dysentery	Classed with "diarrhœa"	†Distinguished from "diarrhœa."
Empyema	Pleurisy	Other infective conditions.
Endocarditis, Infective	Valvular disease	†Infective endocarditis.
Epidemic Diarrhœa	Classed with "diarrhœa"	†Distinguished from "diarrhœa."
Epidemic Rose Rash	*Epidemic rose rash	†German measles.
Fatty Degeneration of Heart	Other diseases of circulatory system	†Among cardiac diseases.
Fever, Continued	Simple and ill-defined fever	†Pyrexia of uncertain origin.
Fibroid Lung Disease	Other respiratory diseases	†Fibroid disease of lung.
Fistula	*Fistula	Diseases of digestive system.
Food Poisoning	Accidental poisoning	†General diseases.
Gall-stones	*Gall-stones	Other diseases of liver.
Gastric Catarrh	Diseases of stomach	†Gastric catarrh.
Gastric Ulcer	Diseases of stomach	†Gastric ulcer.
General Paralysis of Insane	Classed with "insanity"	†Distinguished from "insanity."
Hæmatemesis	*Hæmatemesis	Referred to cause, if known.
Hæmaturia	*Hæmaturia	Other diseases of urinary system.
Hæmophilia	{	
Hæmorrhagic Diathesis	Classed with purpura	†Distinguished from purpura.
Hemiplegia	*Diseases of nervous system	Diseases of blood vessels.
Hydatids	*Hydatid disease	Parasitic diseases.
Imperforate Anus	*Imperforate anus	With other congenital defects.
Industrial Poisoning	Accidental poisoning	†General diseases.
Infective Enteritis	With "enteritis"	*Synonym of epidemic diarrhœa.
Infective Conditions, Other	†General diseases.
Injury at Birth	Accident or negligence	†General diseases.
Insanity	With general paralysis of insane	*Distinguished from general paralysis.
Intestine, Ulcer of	*Ulceration of intestine	Enteritis.
Intussusception of Intestine	*Intussusception of intestine	Intestinal obstruction.
Locomotor Ataxy	Diseases of spinal cord	†Diseases of nervous system.
Lupus	*Diseases of integumentary system	*Among tuberculous diseases.
Malaria	Classed with ague	†General diseases.
Malignant Disease	*Cancer	*Cancer undefined.
Melæna	*Melæna	Other diseases of digestive system.
Mortification	*Ill-defined causes	Referred to cause, if known.
Neuritis, Poly-Neuritis	Other nervous diseases	†Diseases of nervous system.

* Signifies "entered on a separate line."

† Indicates that a separate line has now been assigned for the first time.

Fever caused 1 death in Glasgow; and Simple Continued Fever 4 deaths in Glasgow, 2 in Paisley, and 1 death each in Leith, Greenock, and Kilmarnock.

Rheumatic Arthritis	Constitutional diseases	+General diseases.
Rheumatic Fever	Classed with rheumatism of heart .	+Distinguished from rheum. of heart.
Rheumatic Gout	Constitutional diseases	Classed with rheumatic arthritis.
Rheumatism of Heart	Classed with rheumatic fever . . .	+Distinguished from rheumatic fever.
Scarcina	Cancer	+Among malignant diseases.
Scrofula	*Other forms of tuberculosis . . .	*Among tuberculous diseases.
Septicæmia	Classed with pyæmia	*Distinguished from pyæmia.
Spina bifida	*Spina bifida	With other congenital defects.
Stomatitis	*Stomatitis	Mouth, pharynx disease.
Starvation	*Dietetic diseases	*General diseases.
Stricture of Intestine	*Stricture of intestine	Intestinal obstruction.
Stricture of Urethra	Classed with gonorrhœa	Other diseases of urinary system, unless gonorrhœal.
Suppression of Urine	*Suppression of urine	Nephritis (unless obstructive).
Tabes Mesenterica	Classed with tuberculous peritonitis	*Distinguished from tuberc. periton.
Tetanus	Diseases of digestive system . . .	*General diseases.
Tetanus	Diseases of nervous system . . .	+General diseases.
Tuberculosis, General	*Vegetable parasitic diseases . . .	Parasitic diseases.
Tuberculosis of Other Organs . .	} Classed with scrofula	+Distinguished from scrofula.
Tuberculous Peritonitis		+Distinguished from tabes mesenterica
Tuberculous Phthisis	Phthisis	+Distinguished from "phthisis."
Ulceration of Intestine	*Ulceration of intestine	Enteritis.
Ulcer of Stomach	With diseases of stomach	+Gastric ulcer.
Uremia	*Uremia	Nephritis.
Uterine Tumour	Diseases of uterus	+Distinguished from other diseases of the uterus.
Want of Breast Milk	*Classed with starvation	+Distinguished from starvation.

* Signifies "entered on a separate line."

+ Indicates that a separate line has now been assigned for the first time.

The death-rate from Diarrhoea was 209 per hundred thousand in Motherwell, the next highest, 100 per hundred thousand, falling in Coatbridge.

During the year 1901 the deaths registered from Small-pox amounted to 278, being at the rate of 6 per hundred thousand living, and constituting 0·35 per cent. of all the specified causes. 171 were of males and 107 of females. This is the largest number of deaths from Small-pox which has been recorded in any year since 1874. Of these deaths, 200 occurred within the city of Glasgow, and 52 in other parts of the county of Lanark; and the remaining deaths were distributed among the counties as follows:—13 in Renfrew, 3 each in Forfar, Stirling, and Ayr, 2 in Aberdeen, and 1 each in Edinburgh and Dumfries.

Measles caused 1,655 deaths in 1901, of which 858 were of males and 797 of females. This gives a proportion for both sexes of 37 to every hundred thousand of the population, and of 2·08 per cent. of the total deaths. The highest rate of mortality was 53 per hundred thousand, in the Principal Town Districts; and the lowest, 6, in the Insular Rural.

Scarlet Fever accounted for 595 deaths, 269 being of males and 326 of females. These deaths were at the rate of 13 per hundred thousand persons, and constituted 0·75 per cent. of the total mortality.

The deaths of 689 persons were attributed to Influenza, of whom 316 were males and 373 females. The number for both sexes is 2,022 less than that recorded during the preceding year. The mortality corresponded to a rate of 16 per hundred thousand of the population, and formed 0·87 per cent. of the total deaths. The Insular Rural Districts suffered most severely from this disease, the death-rate being 92 per hundred thousand of the population, compared with 19 in the Mainland Rural, 15 in the Small Town, 13 in the Large Town, and 11 in the Principal Town Districts.

TABLE XXX.—Number and Proportion of Deaths at different Ages from the Principal Epidemic and Other Diseases in Scotland in 1901.

To Hooping-cough the deaths of 1,234 males and 1,517 females were ascribed; the total of 2,751 for both sexes is equivalent to a rate of 62 per hundred thousand of the population, and of 3·47 per cent. of the whole mortality. The highest rate was 89 per hundred thousand, in the Principal Town Districts; and the lowest, 21, in the two Rural groups.

The deaths from Diphtheria during the year 1901 amounted to 739 (378 males and 361 females), and were equal to a rate of 17 in every hundred thousand of the population, and to 0·93 per cent. of the total deaths. The rate of mortality was 22 per hundred thousand persons in the Large Town Districts, and 5 in the Insular Rural.

The deaths referred to Continued Fevers numbered 777, being in the proportion of 17 per hundred thousand of the population, and constituting 0·98 per cent. of the total mortality. Enteric Fever caused 717 deaths, 430 being of males and 287 of females, equivalent to 16 per hundred thousand of the estimated population. The mortality from this disease was relatively greater in the Urban than in the Rural districts. The deaths of 17 males and 18 females were attributed to Typhus Fever, of 2 males and 3 females to Cerebro-spinal Fever, and of 11 males and 9 females to Pyrexia of uncertain origin. Of the 717 deaths from Enteric Fever, it is shown in Table XXXIX. that 112 occurred in the Rural districts, constituting 83·58 per cent. of the total fever mortality therein; and 605 in the Town districts, or 94·09 per cent. of the total fever deaths in these groups. Of the 35 deaths from Typhus, 16 were registered in the Rural and 19 in the Town districts; and of the 5 from Cerebro-spinal Fever, 2 were in the Rural and 3 in the Urban districts.

The deaths of one male and one female were returned as due to Plague, both having occurred in Glasgow.

During the year 1901 the deaths attributed to Epidemic Diarrhœa or Infective Enteritis, and to Diarrhœa without further qualification, amounted to 2,210, those of males numbering 1,189 and of females 1,021. These deaths were equal to a rate of 50 per hundred thousand persons living, and constituted 2·78 per cent. of the total mortality. The greater prevalence of Diarrhœa among the inhabitants of the Town districts than among the Rural population is shown by the rates for the various groups of districts, which were as follows:—61 in the Principal Town, 55 in the Large Town, 49 in the Small Town, 28 in the Mainland Rural, and 10 in the Insular Rural Districts.

The deaths from all forms of Pneumonia amounted to 5,784, those of males numbering 3,390 and of females 2,394. Of these deaths, 552 were returned as due to Lobar Pneumonia, 1,899 to Broncho-pneumonia, 5 to Epidemic Pneumonia, and 3,328 to Pneumonia without further specification. These deaths together formed 7·29 per cent. of the total mortality, and were at the rate of 130 per hundred thousand of population, the rate for males alone being 157, and for females 105. The rate of mortality for both sexes in the Principal Town Districts was 173; in the Large Town Districts, 124; in the Small Town Districts, 98; in the Mainland Rural, 83; and in the Insular Rural, 55.

The deaths caused by diseases of a Tuberculous character numbered 9,911 (males 4,956, females 4,955), and were in the proportion of 223 per hundred thousand of the population, and of 12·49 per cent. of the total deaths. The corresponding rates in the Principal Town Districts were 257 per hundred thousand, and 12·99 per cent.; in the Large Town Districts, 228 and 12·92; in the Small Town Districts, 201 and 12·09; in the Main-

land Rural Districts, 173 and 11·19; and in the Insular Rural Districts, 197 and 12·75. Of these deaths 697 were stated to have been due to

of age; 2,253 or 68·17 per cent. were aged between 15 and 45; and 769 or 23·27 in every hundred were over 45 at death. Of the 3,471 females who died from this disease, 435 or 12·53 per cent. were under 15 years; 2,522 or 72·66 per cent. were between 15 and 45; and 514 or 14·81 per cent. were aged 45 and upwards. Among the principal towns the death rate from Phthisis per hundred thousand inhabitants ranged from 192 in Leith, 185 in Glasgow, and 181 in Edinburgh, to 111 in Motherwell, 129 in Kirkcaldy, and 130 in Coatbridge. In addition to the 6,776 deaths from Phthisis there are included in the mortality from Tuberculous diseases 1,123 deaths from Tuberculous Meningitis, 441 from Tuberculous Peritonitis and 628 from Tabes Mesenterica, 15 from Lupus, 251 from Tubercle of other organs, 630 from General Tuberculosis, and 47 from Scrofula.

The deaths attributed to Cancer or Malignant disease amounted to 3,662, and were equal to a rate of 82 per hundred thousand of the population, and to 4·61 per cent. of the whole mortality. Of these deaths 1,452 were of males and 2,210 of females, the death-rate for males being 67 and for

females 97 per hundred thousand of each sex respectively. The rate for both sexes was 91 in the Mainland Rural Districts, 84 in the Principal Town Districts, 82 in the Small Town Districts, 81 in the Insular Rural Districts, and 66 in the Large Town Districts. Tables XXX. and XXXI. show the relative fatality from Cancer in the principal towns of Scotland. Arranged in decreasing order of Cancer mortality these towns stood as follows:—Dundee, 118 per hundred thousand inhabitants; Edinburgh, 109; Perth, 97; Kilmarnock, 96; Aberdeen, 90; Greenock, 87; Paisley, 77; Glasgow and Kirkcaldy, 76; Coatbridge, 73; Leith, 68; Partick, 57; Motherwell, 52; Hamilton, 46; and Govan, 43. Of the 3,662 deaths from Malignant disease, 1,520 were distinguished as due to Carcinoma and 176 to Sarcoma, the remaining 1,966 being attributed to "Cancer" or "Malignant disease" without notification of the particular form. Table XXXV. shows, for males and for females, the deaths from Malignant disease in 1901, classified according to the part of the body affected. In the deaths for the year under notice the most common seat of the disease in both men and women was the stomach; after which the organs most frequently affected in males were the liver and intestines, and in females the uterus and breast. The frequency with which the female generative

and mammary organs are attacked by this disease causes the Cancer mortality to be greater among women than among men; nevertheless men appear to be more subject than women to Malignant disease of the jaw, lip, mouth, tongue, and throat.

Developmental diseases of children caused 3,319 deaths, of which 1,864 were of boys and 1,455 of girls. Premature birth accounted for 2,242 of these deaths, Atelectasis for 149, other congenital defects for 504, and Teething for 284.

Diseases of the Brain and Nervous system, in which Apoplexy and Hemiplegia are not now included, accounted for 5,028 deaths, 2,689 being of males and 2,339 of females. These diseases caused a mortality at the rate of 113 per hundred thousand living, and constituted 6·33 per cent. of the total deaths. The highest rate was 129, in the Principal Town Districts, and the lowest, 61, in the Insular Rural. Among the principal towns the highest proportions were in Govan and Coatbridge, being 163 and 160 per hundred thousand of population respectively; and the lowest in Motherwell and Leith, being 72 and 73 respectively. The most fatal diseases of the nervous system were Meningitis, to which 905 males and 824 females succumbed; and Convulsions, to which the deaths of 657 males and 516 females were due. In addition, 161 males and 153 females died from Softening of the brain, 196 males and 142 females from Insanity and General paralysis of the insane, 172 males and 125 females from Epilepsy, and 160 males and 163 females from Paraplegia and diseases of the spinal cord.

Diseases of the Circulatory system caused the deaths of 5,659 males and 6,559 females, the total of 12,218 for both sexes being at the rate of 275 per hundred thousand of the population, and constituting 15·39 per cent. of the whole mortality. The death-rates from these diseases in the groups

of districts were as follows:—308 in the Mainland Rural Districts, 278 in the Small Town Districts, 266 in the Large Town Districts, 264 in the Principal Town Districts, and 215 in the Insular Rural Districts. The towns having the highest rates of mortality are Greenock 342 per hundred thousand, Dundee 306, and Perth 297; and those with the lowest are Motherwell 176, Govan 195, and Partick 205. A distinction is now made in diseases of the Circulatory system, between those affecting the Heart and those affecting the Blood Vessels: to the former group 7,193 deaths were due; to the latter, 5,025. Of the 7,193 deaths from diseases of the Heart, 1,795 were assigned to Endocarditis or Valvular disease, and 4,766 to unspecified forms of Heart disease. Cerebral Hæmorrhage, Apoplexy, and Hemiplegia, which have been transferred from among diseases of the Nervous system to those of the Blood Vessels, caused 4,417 deaths, 1,948 being of males and 2,469 of females.

To diseases of the Respiratory system there were assigned 7,471 deaths—males 3,697, females 3,774—being in the ratio of 168 to every hundred thousand of the population, and of 9·41 to every hundred specified causes of death. The rate of mortality from these diseases was highest in the Principal Town and lowest in the two Rural districts. The principal towns having the heaviest relative mortality from diseases of this class were Dundee 243 per hundred thousand, Glasgow and Paisley each 235; those having the lowest mortality were Kirkcaldy 126, Motherwell 134, and Partick 138. Of the 7,471 deaths from diseases of the Respiratory organs, Bronchitis accounted for 5,818, those of males numbering 2,794, and of females 3,024. Croup, not stated to be either spasmodic or membranous, caused 139 deaths, males 79, females 60; and Pleurisy caused 359, males 220, females 139.

The deaths from diseases of the Digestive organs numbered 5,780, and were equal to a rate of 130 per hundred thousand of the population, and to 7·28 per cent. of the whole mortality. Disorders of the Digestive system caused a death-rate of 137 per hundred thousand of population in the Principal and in the Small Town Districts, a rate of 125 in the Large Town Districts, of 116 in the Mainland Rural, and of 84 in the Insular Rural Districts. In the principal towns the rates from these diseases

TABLE XXXVI.—Deaths from Small-pox in Scotland, 1855-1901.

YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.
1855	1,309	1871	1,442	1887	17
1856	1,306	1872	2,448	1888	3

1869	64	1885	39	1901	278
1870	114	1886	24		

ranged from 198 in Kilmarnock, 185 in Perth, and 163 in Hamilton, to 102 in Paisley, 106 in Leith, and 111 in Govan. Gastric ulcer caused the deaths of 254 persons, of whom 86 were males and 168 females; Gastric catarrh accounted for 701 deaths; and other non-malignant diseases of the stomach for 211. Enteritis, not stated to be epidemic or infective, accounted for 688 deaths; and Gastro-enteritis for 1,409, of which 1,165 were of children under two years of age. From Cirrhosis of the Liver there died 157 males and 84 females, and from other affections of the Liver 209 of the former and 273 of the latter. The deaths of 439 persons were assigned to Intestinal obstruction, of 628 to Peritonitis, and of 156 to Appendicitis, of whom 90 were males and 66 females.

The deaths from diseases of the Urinary system, 2,184 in number, were equivalent to a rate of 49 per hundred thousand of the estimated population, and constituted 2·75 per cent. of all deaths. The deaths of males were 1,295, and of females 889, the death-rates being 60 and 39 per hundred thousand of each sex respectively. The deaths from Acute Nephritis numbered 606; from Chronic Bright's disease, 980; from Calculus, 30; from other diseases of the Bladder and Prostate, 413; and from other or undefined diseases of the Urinary system, 155.

From diseases of the organs of Generation there resulted 212 deaths, 13 being of males and 199 of females. Ovarian disease caused 68 deaths, and Uterine affections 105. From diseases of Pregnancy and Childbirth there resulted 627 deaths, in which number are included 287 due to septic infection.

Diseases of the Locomotor system caused 312 deaths—males, 184, females 128—equal to 7 per hundred thousand of the population; and diseases of the Skin accounted for 136, the males numbering 62 and the females 74.

Among the ill-defined causes are included 2,434 deaths ascribed to Atrophy or Debility, 2,188 of which were of infants under one year; and 4,275 attributed to Old Age, 1,669 being of men and 2,606 of women. From all causes there were registered the deaths of 33 men and 99 women at ages between 95 and 100, and of 6 men and 14 women who had completed their hundredth year. Four of the men were aged 100, and two 101; four of the women were 100, five were 101, two were 102, one was 103, one 104, and one 106.

The deaths of 3,242 persons were due to Violence, equivalent to 4·08 per cent. of the whole mortality, and to 73 per hundred thousand of the population. Of these deaths 2,316 were of males and 926 of females, giving rates of 107 and 41 per hundred thousand of the respective populations.

The deaths of 137 males and one female occurred in Coal mines, of 16 males in other mines, and of 10 males in quarries. 232 males and 13 females were stated to have been killed on Railways, 119 males and 21 females by Vehicles other than railway, and 29 males and 7 females by Horses. Of the 430 deaths from Burns and Scalds, Conflagrations were the ascribed cause in the case of 3 males and 3 females, and Explosions in that of 21 males and 4 females. From Poisoning the deaths of 62 males and 55 females resulted, 8 of the former and 14 of the latter being Suicidal. Drowning caused the deaths of 499 males and 105 females, including 40 men and 16 women who committed Suicide by this method. The deaths of 200 males and 139 females resulted from Suffocation, 100 of the former and 75 of the latter having been due to Overlaying.

The deaths of 9 males and 8 females were attributed to Homicide, and of 177 males and 60 females to Suicide.

TABLE XXXVIII.—Vaccinations in Scotland, 1891-1901, deducting from the Births those who died before they could be Vaccinated, and giving the Proportion of the Vaccinated to the surviving Births of each Year.

Years.		Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccination.			Removed from list before Vaccination, or otherwise unaccounted for.	TOTAL LIVING.

The poisons by which death was accidentally caused were opium in the case of 14 males and 10 females; morphia, 2 males; hemlock, 2 males and 1 female; chloroform, 6 males and 7 females; an anæsthetic, 1 male; chloral hydrate, 1 male; chloral hydrate and bromide of potassium, 1 male; prussic acid, 1 male; carbolic acid, 4 of each sex; alcohol, 1 female; perchloride of mercury, 1 male; ammonia, 3 of each sex; caustic soda, 1 male. phosphorus, 1 male; hydrochloric acid, 1 male; nitric acid, 1 female; sulphuric acid, 1 female; salts of sorrel, 1 male and 2 females; carbonic acid gas, carbon monoxide gas, and gas from a lime-kiln, each 1 male; coal gas, 4 males and 7 females; sewer gas, 1 male; weed-killer, 1 female; unripe fruit, 1 male; and an irritant poison, 1 male and 2 females: in the case of 4 males and 1 female the poison was not specified.

The poisons used to effect suicide were, opium by 3 males and 2 females; A.B.C. liniment, 1 female; carbolic acid, 2 males and 5 females; prussic acid, 1 male; oxalic acid, 1 female; salts of sorrel, 2 females; arsenic, 1 male; nitrate of mercury, 1 female; ammonia, 1 female; and coal gas, 1 male; the poison used by one female not being stated.

Appendix Table 5 shows the method by which Suicide was accomplished in Scotland, in the groups of districts, and in the counties, and principal towns. The following are the numbers of each sex who died by the different methods:—6 men on railways and 14 by firearms; 58 men and 8 women by cutting or stabbing themselves, 5 men and 4 women by jumping from a height, 40 men and 16 women by drowning, 44 men and 18 women by hanging, 8 men and 14 women by poison, and 2 men in a manner not

specified. In the Principal Town Districts there died by Suicide 81 men and 25 women; in the Large Town Districts, 20 men and 5 women; in the Small Town Districts, 32 men and 14 women; in the Mainland Rural Districts, 43 men and 15 women; and in the Insular Rural Districts, one of each sex.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of the year are the Notes made by Dr. Buchan, under the direction of the Council of the Scottish Meteorological Society, which appear in the Registrar-General's Quarterly Reports:—

The weather of *January* was characterised by a mean barometric pressure a little above the average, with a monthly range slightly under it; a mean temperature about half a degree above the average, with the average daily range; a very low humidity; a mean rainfall, about an inch less than the average, but falling on the average number of days; a slight excess of N.E. winds, a little stronger than the average. The mean barometric pressure was 29·878 inches, or 0·082 inch above the average. At stations on the eastern side of the country south of the Grampians, the excess of pressure was somewhat less than elsewhere, thus forming gradients for the excess of N.E. winds which prevailed. The mean temperature was 37°·8, or 0°·6 above the average, the excess being equally divided between the days and the nights. Over south-western and south-eastern districts, temperature was slightly under the average, whereas at many places north of the Grampians, temperature was fully a degree above the average. The coldest weather occurred on the last week, when the mean temperature at Aberdeen and Leith was 3°·0 under the average. The absolutely highest temperature was 57°·7 on the 14th at Glencarron, and the lowest 15°·6 on the 10th at Braemar. The mean rainfall was 2·97 inches, or 23 per cent. under the average. The rainfall was above the average in a few scattered districts in the counties of Aberdeen, Banff, Inverness, Sutherland, and Orkney, but the excess was small, except at Logie Coldstone, where it was 67 per cent. above the average. In all other parts of the country the rainfall was short of the average, the deficiency generally being from a third to a half of the average. Comparatively little rain fell on the first half of the month; but during the rest of the month wet and stormy weather prevailed.

The weather of *February* was characterised by a high mean barometric pressure, with a monthly range a little under the average; a mean temperature two degrees and a half under the average, with a mean daily range about half a degree greater; a mean humidity slightly less than the average; a mean rainfall an inch less than the average, falling two days fewer than the average; an eight days' excess of northerly winds, blowing with a force much under the average. The mean barometric pressure was 30·053 inches, or 0·203 inch above the average. Pressure was markedly greater in the west and north than in the east and south, resulting in an unwonted excess of northerly winds with dry cold weather. The mean temperature was 35°·9, or 2°·4 less than the average, the days being 2°·1 and the nights 2°·7 under the average. The lowest temperature occurred in inland situations from the Solway to the Grampians, where at several places it was about three degrees below the average; but at stations in the west near the sea, temperature was scarcely a degree under the average. A marked

feature of the weather of the month was the continuously low maximum temperature which prevailed, temperature at a considerable number of places not rising above $45^{\circ}0$ on any day. The absolutely highest temperature was $57^{\circ}8$ on the 20th at Lairg, and the lowest $0^{\circ}5$ on the 14th at Braemar. The mean rainfall was 2.06 inches, or 33 per cent. less than the average. Its distribution among the stations was very unequal. It was above the average in the counties of Aberdeen, Banff, Nairn, north-east of Inverness, Ross, Sutherland, and Caithness; the excess being 61 per cent. at Gordon Castle, and 50 per cent. at Kingussie, Logie Coldstone, and Wick. Everywhere else it was less than the average, the greatest deficiency, upwards of 70 per cent., being in inland situations south of the Grampians. South of the Grampians, nearly the whole of the rain fell during the last week, but to the north nearly the whole month may be characterised as wet and cold.

The weather of *March* was characterised by a mean barometric pressure, a little under the average, with a large monthly range, being the largest that has occurred since March 1876; a mean temperature, nearly a degree under the average, with the average diurnal range; a mean humidity about the average; a mean rainfall a little under the average, falling one day more than the average; and five days' excess of north-easterly winds, blowing with a force slightly above the average. The mean barometric pressure was 29.756 inches, or 0.041 inch less than the average. Much lower pressures obtained in the south than in the north. Thus while pressure was 0.088 inch under the average on the Solway, it was 0.008 inch above it at North Unst. The excess in the north and defect in the south brought about a predominance of cold north-easterly winds. The mean temperature was $38^{\circ}5$, or $0^{\circ}9$ less than the average, the diminution of temperature being equally partitioned between the days and nights. The deficiency of temperature was nearly equally distributed among all the districts of Scotland. The last week was the coldest part of the month, the mean temperature of which was $8^{\circ}0$ under the average at Glasgow and Aberdeen. The absolutely highest temperature was $64^{\circ}0$ on the 10th at Aberdeen, and the lowest was $1^{\circ}0$ on the 29th at Braemar. The mean rainfall was 2.43 inches, or 14 per cent. under the average. Its distribution over the country was very irregular. It was above the average over the slopes extending from the Grampians to the Moray Firth, the excess being chiefly due to heavy falls of snow—the excess amounting at Inverness and Logie Coldstone to 50 per cent. Over the rest of Scotland it was under the average, but nowhere was the deficiency excessive. The larger portion of the precipitation occurred in all parts of the country during the first week; and to the north of the Grampians the third and fourth were also characterised by frequent snow and rain. No auroras were reported for February and March.

The weather of *April* was characterised by a mean barometric pressure considerably under the average, with a monthly range a little above it; a mean temperature half a degree above the average, with a mean daily range much above it; a very low mean humidity; a mean rainfall, seven-tenths of an inch above the average, falling on three days more than the average; and a three days' excess of south-westerly winds, blowing with a force very little above the average. The mean barometric pressure was 29.737 inches, or 0.151 inch under the average, being the lowest mean pressure that has occurred since 1856, except in 1867, when it was only 29.591 inches. The diminution of pressure was greater in the north and west than in the south

and east, resulting in an increase of winds from the south-west. The mean temperature was $44^{\circ}7$, or half a degree above the average, the days being $1^{\circ}6$ above it, but the nights $0^{\circ}5$ below it. Thus the higher temperature of the month was wholly caused by the relatively high temperature of the days, due to the great dryness of the air and the strong sunshine which prevailed. Over a rather broad band extending from the Grampians to the Firth of Tay and westwards to Loch Linnhe, temperature was under the average, the diminution being half a degree at Aberdeen, Lednathie, Montrose, Arbroath, Perth, Stronvar, and Airds. Elsewhere over Scotland temperature exceeded the average of the month, the excess being a degree in the Southern Highlands, along the south shore of the Moray Firth, and about two degrees in Shetland. The absolutely highest temperature was $76^{\circ}9$ on the 21st at Glasgow, and the lowest $20^{\circ}8$ on the 5th at Tillypronie. The mean rainfall was 2.90 inches, or 31 per cent. above the average. The distribution of this rainfall over the country was very unequal, being under the average between the Firth of Forth and the Tweed, and in the counties of Aberdeen, Banff, Elgin, Nairn, Ross, and the northern half of Inverness. The greatest deficiency in the south-east was 42 per cent. at Smeaton, whereas in Inverness-shire the deficiency at several places was 50 per cent. In all other parts of Scotland the rainfall was above the average, the greatest excess, in many cases more than 50 per cent., being in the counties of Shetland, Orkney, Caithness, Argyll, Lower Strathclyde, and Galloway. The greatest excesses were, in percentages, 100 at Bressay, 80 at Wick and Campbeltown, 76 at Glenlee, and 65 at Wolfelee. Nearly the whole fell from the 1st to the 18th, and from the 27th to the 29th. Very heavy rainfalls occurred on the 2nd and 3rd, amounting on the 2nd to 2.76 inches at Stronvar, 2.45 inches at Glenlee, 2.35 inches at Greenock, and 2.26 inches at Lednathie; on the 3rd, 2.04 inches at Ochtertyre, and on the same days upwards of an inch fell at numerous stations. Snow and hail were of occasional occurrence during the first half of the month; and thunder on the 9th and 10th.

The weather of May was characterised by an unusually high mean barometric pressure, with a very large monthly range; a mean temperature much above the average, with a mean daily range greater than any hitherto recorded in May during the past 46 years; a mean humidity under the average; a mean rainfall less than the average, falling on three days fewer than the average; an excess of easterly winds, blowing with a force much under the average. The mean barometric pressure was 30.125 inches, or 0.185 inch above the average. This high pressure has been only twice exceeded since 1856, viz., in 1876 and 1896, when it was 30.158 inches and 30.260 inches respectively. The excess was greater in the north than in the south, being 0.240 inch at North Unst, but only 0.175 inch in Berwickshire, thus forming lower barometric gradients, resulting in a diminished wind force. The mean temperature was $51^{\circ}4$, or $2^{\circ}4$ above the average, the days being $4^{\circ}7$, but the nights only $0^{\circ}2$ above the average. Thus the high temperature was wholly due to the greater heat of the days, the general type of the weather being anticyclonic, with the accompanying clear skies, dry air, and strong sunshine. The increase was greatest in the west, where at many places it was $4^{\circ}0$, and least in the east, where at a number of places from Kinnaird Head to the Tweed it was less than a degree. The absolutely highest temperature was $80^{\circ}0$ on the 25th at Poltalloch, and the lowest $27^{\circ}0$ on the 14th at Wolfelee. The mean rainfall was 1.96 inches, or 14 per cent. under the average. It was above the

average in parts of the counties of Dumfries, Peebles, Berwick, Perth, Forfar, Aberdeen, Ross, and Sutherland, but the excess in all cases was small. In all other districts the rainfall was under the average, the largest deficiency being at the more western stations, being at a number of stations more than 70 per cent., and upwards of 50 per cent. over extensive breadths. Nearly the whole rain fell from the 5th to the 11th, and from the 26th to the end of the month. The rest of the month was exceptionally dry and rainless.

The weather of *June* was characterised by a mean barometric pressure a little above the average, with a monthly range much above it; a mean temperature, fully a degree under the average, with a mean daily range a little above it; a mean humidity very low, indeed no lower mean humidity for June has been hitherto recorded; a mean rainfall a little over the average, falling one day more than the average; and five days of excess of winds from N., N.W., W., and S., blowing with a force much above the average. The mean barometric pressure was 29·961 inches, or 0·019 inch above the average. The geographical distribution of pressure was peculiar. Thus in Shetland it was 0·050 inch under the average; at Cape Wrath, Inverness, and Gordon Castle it was the average; from which it increased on advancing southwards, till in Galloway it was 0·055 inch above the average. Also everywhere it was relatively much higher in the west than in the east. From this it followed that as pressure diminished more rapidly from south to north than usual, steeper barometric gradients were formed, and the force of the wind much exceeded the average; and as pressure was greater in the west than in the east, winds from N., N.W., and W. prevailed four days more than the average, accompanied with lowered temperature and a drier atmosphere. The mean temperature was 53°·8, or 1°·1 less than the average, the days being 0°·7 and the nights 1°·5 colder than the average. Temperature was nearly half a degree above the average from Bell Rock to the Tweed at coast stations. In all other parts of the country it was under the average, the greatest depression, about 2°·0, being in strictly inland situations in the counties of Inverness and Aberdeen in the north, and Ayrshire and Galloway in the south. The absolutely highest temperature was 80°·3 on the 8th at Loanhead, and the lowest 33°·5 on the 17th at Leadhills. The mean rainfall was 2·90 inches, or 12 per cent. above the average. The rainfall was below the average to the east of a line passing from Peterhead through Logie Coldstone, Lednathie, Dollar, North Esk Reservoir, and Wolfelee; and also on the west coast from Turnbery to Corsewall, but in nearly every case the deficiency was small. Over all other parts of Scotland the rainfall exceeded the average. The greatest excess occurred in Orkney and Caithness, where at several places double the average was collected. In Strathspey the excess was from 50 to 78 per cent., and the same excess was reported from Easter Galloway. Little rain fell from the 6th to the 9th, 14th to the 16th, and from the 25th to the end of the month.

The weather of *July* was characterised by a mean barometric pressure much above the average, with a monthly range lower than any hitherto recorded for July, except July 1873, when it was only 0·517 inch; a mean temperature unprecedentedly high, being indeed nearly two degrees higher than that of any other month since the Society was founded in 1855, accompanied with an exceedingly large mean daily range of temperature; a mean humidity under the average; a mean rainfall considerably under the average, and falling on five days fewer than the average; and three days'

excess of easterly winds, with a force under the average. The mean barometric pressure was 30·021 inches, or 0·135 inch above the average. The excess was alike in the east and the west in the same latitudes; but it was considerably greater in the north than in the south, thus lowering the normal barometric gradient from south to north, resulting in a reduced force of wind. No storms of wind occurred during the month. The mean temperature was 61°·8, or 4°·6 above the average, the days being 5°·7 and the nights 3°·4 in excess. This is a "record" mean temperature for the month, the highest previously being 60°·4 in 1868. This temperature has, since 1764, been only once exceeded, viz., in July 1779, the mean temperature of this month being 65°·7. The excess was greater in the south than in the north, and in inland situations than near the coast. The type of weather was eminently anticyclonic, with much strong sunshine; and from the 14th to the 27th thunderstorms were of frequent occurrence. The absolutely highest temperature was 91°·0 on the 20th at Dumfries, and the lowest 37°·0 on the 22nd at Glencarron. The mean rainfall was 1·85 inch, or 41 per cent. under the average. At the stations near the sea from Dunrobin to the mouth of the Spey, the rainfall was above the average, the greatest excess being 52 per cent. at Gordon Castle, the large excess there being due to the heavy rainfall, on the 25th and 26th, on which two days there fell 3·41 inches. In every other part of Scotland the rainfall of July was under the average, the greatest deficiency being south of a line drawn from Aberdeen to Monach. In Galloway generally the amount collected was only about a fourth of the average. A marked feature of the meteorology of the month was the frequency of wide-spread fogs on the coasts from the 3rd to the 11th and the 19th to the 30th.

The weather of *August* was characterised by a mean barometric pressure a little above the average, with a monthly range considerably above it; a mean temperature a degree above the average, with a mean daily range also a degree above the average; a rather low mean humidity; a mean rainfall, fully half an inch above the average, falling on the average number of days; and four days' excess of westerly winds, with a force rather above the average. The mean barometric pressure was 29·920 inches, or 0·062 inch above the average, the excess being very much greater in the south

TABLE XLI.—Monthly Mortality and Mean Temperature in Scotland during 1901, compared with the Mean of the Ten Years 1891-1900.

YEAR 1901.				1891-1900.	
MONTHS.	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.
January	37·8	7310	1095	1163	36·8
February	35·9	6995	1048	1087	37·4
March	38·5	7038	1054	1155	39·7
April	44·7	7485	1121	1043	44·7
May	51·4	6794	1018	1005	48·8
June	53·8	5750	861	929	55·2

November	41·1	6746	1011	982	42·4
December	36·4	7399	1108	1085	38·7
YEAR	46·7	80,103	12,000	12,000	46·4

than in the north, resulting in an excess of westerly winds, with an excess of the usual force of the winds of August. The mean temperature was $57^{\circ}\cdot5$, or $0^{\circ}\cdot9$ above the average, the days being $1^{\circ}\cdot4$, and the nights $0^{\circ}\cdot3$ above their averages. Over the whole of the eastern slope of Scotland, and also in Galloway, Lanarkshire, Dumbartonshire, Orkney, and Shetland, the mean temperature was above the average, the greatest excess, about two degrees, being in inland districts from Inverness to Edinburgh. On the other hand, in strictly western situations from Cape Wrath, temperature was about half a degree under the average, owing to the increased prevalence of winds from the west, taken in connection with the anticyclonic type of weather which generally prevailed. The absolutely highest temperature was $82^{\circ}\cdot0$ on the 1st at Smeaton and on the 8th at Inverness; and the lowest $35^{\circ}\cdot0$ on the 17th at Kingussie. The mean rainfall was $4\cdot18$ inches, or 15 per cent. above the average. A marked feature of the meteorology of the month was the number of thunderstorms which occurred, and as these were accompanied with heavy downfalls of rain over very restricted areas, the distribution of the rainfall was extremely irregular over the country. Most rain fell in Shetland, Orkney, and to the south of the Grampians, but more particularly in the west from Ardnamurchan to the Solway, the excess at several places being from 50 to 100 per cent. On the other hand, to north of the Grampians and east of the Caledonian Canal, and in the counties of Kincardine, Ross, and Sutherland, the rainfall was deficient, the deficiency being generally about a fourth of the average. The weather was stormy from the 26th to the 29th.

TABLE XLII.—Meteorology of Scotland for 1901, deduced from Observations made at 65 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1901.

1901.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	YEAR.
Highest Temp. in shade	$57^{\circ}\cdot7$	$57^{\circ}\cdot8$	$64^{\circ}\cdot0$	$76^{\circ}\cdot9$	$80^{\circ}\cdot0$	$80^{\circ}\cdot3$	$91^{\circ}\cdot0$	$82^{\circ}\cdot0$	$75^{\circ}\cdot4$	$60^{\circ}\cdot3$	$60^{\circ}\cdot0$	$58^{\circ}\cdot0$	$91^{\circ}\cdot0$

The weather of *September* was characterised by a mean barometric pressure slightly above the average, and a monthly range slightly under it; a mean temperature considerably above the average, with a mean daily range slightly under it; a mean humidity considerably under the average; a mean rainfall fully an inch under the average, falling on one day less than the average; a seven days' excess of wind from the S.E. The mean barometric pressure was 29·860 inches, or 0·017 inch above the average. Its geographical distribution was very peculiar, being above the average to north-east of a line drawn from the Butt of Lewis to near Kelso, the excess above the average being greatest in Shetland, Orkney, and Aberdeenshire; but to the south-west of this line pressure was under the average, the greatest deficiency being from Monach to Campbeltown. In Shetland the excess was 0·080 inch, and the deficiency was 0·050 inch at Monach, Skerryvore, and Campbeltown. This difference in the distribution of the pressure resulted in the unwonted prevalence of south-easterly winds, bearing in their train a high temperature and a greatly reduced rainfall. The mean temperature was 54°·8, or 2°·0 above the average, the increase of the days being 1°·8 and the nights 2°·2. The least excess of temperature was on the east coast, which, owing to the prevalence of south-easterly winds, gradually increased, on advancing towards the north-west, from a degree and a half at Aberdeen to three degrees at Fort Augustus. The absolutely highest temperature was 75°·4 on the 10th at Loanhead, and the lowest 29°·5 on the 16th at Braemar. The mean rainfall was 2·46 inches, or 30 per cent. under the average. In Galloway and the extreme south-west of Argyll, the rainfall was a little above the average; but in all other parts of the country it was under the average, the general deficiency being about half the average. It fell chiefly from the 6th to the 10th, 17th to the 20th, and 25th to the end of the month. On the 19th, 27th, and 28th, there were heavy rainfalls at several of the stations.

TABLE XLIII.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Diseases, in Eight of the Principal Towns of Scotland, during each Month of the Year 1901.

* Including Pneumonia.

The weather of *October* was characterised by a mean barometric pressure a little above the average, with a monthly range a little below it; a mean temperature nearly the average, with a mean daily range much above it; a mean humidity slightly under the average; a mean rainfall slightly above the average, but falling on three days more than the average; a two days' excess of southerly winds, blowing with a mean force rather under the average. The mean barometric pressure was 29·866 inches, or 0·054 inch above the average. To the south of the Grampians pressure was rather above the average, the greatest excess being 0·010 inch on the Solway; but under the average to the north, the largest deficiency being 0·030 in Shetland and the Outer Hebrides. From the comparatively large deficiency in the north-west resulted the excess of southerly winds during the month. The mean temperature was 46°·3, or 0°·2 less than the average, the days being 0°·6 above, but the nights 1°·0 under the average. Temperature was above the average in Shetland, Orkney, and over the south of Scotland south of the Forth and Clyde, the excess, however, being in all cases small. Over all the other districts in Scotland temperature was under the average, the largest deficiency, above one degree, being from the Ochils to the head of Strathspey. The absolutely highest temperature, 69°·3, occurred on the 2nd at Dumfries, and the lowest, 23°·3, on the 26th at Braemar. At a large number of stations temperature did not fall to freezing. The mean rainfall was 4·19 inches, being 4 per cent. above the average. It was very irregularly distributed over Scotland. It was under the average to the east of a line passing from Wolfelee through Stronvar, Fort Augustus, Glen-carron, and Cromarty. The deficiency was greatest, above 50 per cent., between the Cheviots and the Firth of Forth. Elsewhere the rainfall was above the average, in certain districts largely so, being generally about 50 per cent. of excess in Galloway and Argyllshire. At Cally it was 120 per cent. above the average. Taken as a whole, the weather in Scotland for the

month was exceptionally wet. The disastrous storm of the 5th to the 7th was both widespread and protracted.

The weather of *November* was characterised by a mean barometric pressure very much above the average, with a monthly range much under the average; a mean temperature nearly the average, with a large mean daily range; a mean humidity a good deal under the average; a mean rainfall, slightly less than the average, falling on two days fewer than the average; and a three days' excess of west-north-westerly winds. The mean barometric pressure was 30·072 inches, or 0·242 inch above the average. The excess of pressure was considerably greater in the west than in the east, resulting in an increase of north-westerly winds. The mean temperature was 41°·1, or 0°·2 above the average, the days being 0°·9 above, and the nights 0°·5 under the average, the higher temperature of the days being occasioned by the increased sunshine. In the west temperature was about a degree above the average; in the east nearly the average; but in Shetland and Galloway it was nearly a degree under the average. The absolutely highest temperature was 60°·0 on the 20th at Airds, and the lowest 6°·0 on the 16th at Braemar. The mean rainfall was 3·56 inches, or 7 per cent. under the average. The distribution of the rain was unusually irregular. It was above the average on the south shore of the Moray Firth and for some distance inland, and to the south of a line drawn from North Berwick to Campbeltown. Over the rest of Scotland the rainfall was under the average. The deficiency was greatest over a broad district extending from Skye eastwards through Scotland to the east coast from Aberdeen to Fife. The rain fell chiefly from the 7th to the 21st, and was heaviest from the 18th to the 21st. The outstanding feature of the weather of November was the disastrous north-easterly gale of the 12th. The damage to shipping and loss of life on the east coast was very great, and inland there was a complete breakdown of the telegraph wires. Thunder and auroras were not reported.

The weather of *December* was characterised by a mean barometric pressure unusually low, with a monthly range a little above the average; a mean temperature considerably below the average, with a mean daily range a little below it; a mean humidity slightly less than the average; a mean rainfall rather above the average, and falling on four days more than the

TABLE XLV.—Monthly Deaths at Four Periods of Life in Eight of the Principal Towns of Scotland during the Year 1901, and Proportion at each Age in every Hundred Deaths per Month.

December . .	1084	200	1012	778	3074	35·3	6·5	32·9	25·3	100
YEAR . . .	12,424	2,409	10,885	7,633	33,351	37·3	7·2	32·6	22·9	100

average; and four days' excess of winds from the quarter between N.E. and N.W., blowing with a force well above the average. The mean barometric pressure was 29·478 inches, or 0·304 inch below the average. Since 1856 the mean pressure of December has been only twice lower, viz., in 1868 and 1876, when it was respectively 29·312 inches and 29·409 inches. The relative depression was much greater in the south than in the north, and in the east than in the west. This geographical distribution of the pressure, together with the steep gradients, accounts for the direction and force of the wind which prevailed. The mean temperature was 36°·4, or 1°·6 lower than the average, the days being 1°·8 and the nights 1°·4 under the average. Everywhere temperature was less than the average. Generally, the cold was least near the coast and greatest at inland stations. The deficiency was nearly three degrees at Wolfelee, Drumlanrig, Cally, Leadhills, Kingussie, Fort Augustus, and Lairg. On the other hand, it was scarcely a degree at the eastern coast stations from Orkney to Fifeshire. The highest temperature was 58°·0 on the 1st at Perth, and the lowest 9°·5 on the 7th at Braemar. The mean rainfall was 4·74 inches, or 14 per cent. above the average. It was under the average at some scattered stations in the north-west, and in central Argyll, and adjoining parts of Renfrew, Bute, and Dumbarton. The rainfall in other districts was above the average. The excess was 110 per cent. in Arran, 89 per cent. at Stobo Castle, and 56 per cent. at Gordon Castle; but at the other stations it was moderate. The weather was cold, damp, and disagreeable. From the 12th to the 14th a severe snowstorm occurred, and gales were of frequent occurrence. Snow fell frequently from the 14th to near the end of the month, when milder weather set in. Thunder occurred on the 8th, 9th, and 19th.

Tables XLI. onward are intended to show how far the aggregate mortality, as well as the mortality from certain diseases, may be influenced by the different atmospheric conditions prevailing in the successive months of the year.

The mean temperature in 1901 (46°·7) was fractionally above the average for the previous decennial period, 1891-1900. The mean temperature in six months was higher than the corresponding average for the ten years, the greatest difference, 4°·5 above the normal, occurring in July.

TABLE XLVI.—Months equalised to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in Eight of the Principal Towns during each Month of the Year 1901.

YEAR.	12,664	2,458	11,106	7,793	34,021	12,000

The heavier mortality which always accompanies the colder and more inclement months has been noted in previous Reports. The deaths in 1901 were registered during the several months of the year as follows:—9·34 per cent. during April, 9·24 during December, 9·13 during January, 8·79 during March, 8·73 during February, 8·48 during May, 8·42 during November, 8·15 during August, 8·12 during July, 7·27 in October, 7·18 during June, and 7·15 during September.

Table XLIII., which refers to eight of the principal towns, shows that the fatality from the principal epidemic diseases was much greater during the earlier than during the later months of 1901; this to a large extent was caused by the prevalence of Hooping-cough during the first half of the year.

From Small-pox there were registered in these towns 205 deaths, a number which is greatly in excess of the average. There were 36 recorded during January, 57 during February, 74 during March, 26 during April, 6 during May, 4 during June, and 2 during July, none being registered during the other months. The mortality from Measles was at its maximum during the last two months of the year, and the deaths from Scarlet Fever showed a slight increase in the months of July, October, November, and December. Influenza proved most fatal during the months of March and December, though at no period of the year was the mortality from this disease excessive. Hooping-cough caused 1,457 deaths, 1,146 of which occurred during the first half and 311 during the last half of the year. Deaths from Diphtheria were most numerous during the early and late months, and Fevers were most in evidence during November, October, December, and January.

The diarrhoeal diseases were, as usual, most prevalent during the months of July, August, September, and October.

Phthisis caused the greatest number of deaths during the months of January and May, and the least during September and October; but the heavy mortality from this disease does not vary greatly in the different months.

Deaths from diseases of the Respiratory organs were most numerous during the months of November and December, and were at their minimum in August and September.

Diseases of the Heart and Blood-vessels proved most fatal during the first four months of the year, and those of the Brain and Nervous system in the months of March and April.

Deaths from Old Age were registered in largest numbers during the cold months of January, February, March, April, and December.

Tables XLV. and XLVI. are so arranged as to indicate the comparative mortality at four periods of life among the inhabitants of eight of the principal towns. Of the 33,351 persons whose deaths were registered in these towns during the year, 12,424, or 37·3 per cent., were children under five years of age; 2,409, or 7·2 per cent., were between 5 and 20; 10,885, or 32·6 per cent., were between 20 and 60; and 7,633, or 22·9 per cent., were aged 60 years and upwards.

Children under five died in largest numbers in February and April, when Hooping-cough and affections of the Respiratory organs were prevalent; in July and August, the months in which the diarrhoeal diseases became prominent; and in November, when there occurred an increased mortality from Measles and diseases of the Respiratory system.

Deaths among Adolescents (5-20 years) were most frequent during the months of April and May, and least so in January and July.

The mortality among Adults (20-60) was considerably greater in the months of January, February, March, April, and December than in those of August, September, and October.

The first four and last two months of the year proved most fatal to aged people, the lowest mortality occurring in July, August, September, and October.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, *December 1903.*

Owing to the illness, and lamented death, of Dr. Cunynghame, the preparation and printing of this Report has been unavoidably delayed. The Report was completed shortly before he died on 23rd December last.

N.B.—Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Police Burghs or Towns of 2000 inhabitants and upwards are printed in small capitals, thus:—CARLUKE.

An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situated, or which comprise more, or parts of more, than one Parish. The component parts of these Districts will be found at page 564.

A dagger "†" is prefixed to those Districts which consist of only a part of the Civil Parish of the same name.

CAUSES of DEATH in MOTHERWELL, at different Periods of Life, in 1901.—FEMALES. (Continued.)

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
13	Birsay	Part of Harray and Birsay.
14	Deerness	Part of St Andrews and Deerness.
18	Harray	Part of Harray and Birsay.
22	North Ronaldshay	Part of Cross and Burness.
25	St Andrews	Part of St Andrews and Deerness.
26	Sanday	Lady, and part of Cross and Burness.
37b	Keiss	Parts of Canisbay and Wick.
58	Applecross	(1) Part of Applecross; (2) Remainder of Applecross and part of Gairloch.
59b	Carnoch	Parts of Contin and Urray.
86b	Carloway	Parts of Barvas and Uig.
87	Lochs	Lochs, and part of Uig.
92b	Cannich	Parts of Kilmorack and Kiltarlity.
112	Kilmuir	(1) Part of Kilmuir; (2) Remainder of Kilmuir, and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie, and St Andrews-Lhanbryde.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrines	Parts of Aberlour and Mortlach.
167	Seafeld	Parts of Cullen and Rathven.
171b	Ardallie	Parts of Cruden, Ellon, Longside, and Old Deer.
210b	Kinninnonth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmulick.
222b	Millbex	Parts of Fyvie and Monquhitter.
227b	New Pitsligo	Parts of Aberdeen, New Deer, Strichen, and Tyrie.
231	Peterculter	(1) Parts of Aberdeen and Peterculter; (2) Remainder of Peterculter.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
249b.	Ythan Wells	Parts of Auchterless and Forgue.
266	Nigg	Nigg, and part of Aberdeen.
282	Dundee	Dundee, and parts of Liff, Benvie and Invergowrie, and Mains and Strathmartine.
294b	Kilry	Parts of Glenisla and Lintrathen.
324	Aberfeldy	Parts of Dull, Kenmore, and Logierait.
330	Auchtergaven	Parts of Auchtergaven and Logiealmond.
331	Balquhidder	Balquhidder, and part of Comrie.
344	Dowally	Part of Dunkeld and Dowally.
349	Dunkeld	Part of Dunkeld and Dowally.
355b	Foss	Parts of Blair-Athol and Dull.
361	Killin	Parts of Kenmore and Killin.
375	Logiealmond	Parts of Logiealmond, Little Dunkeld, and Methven.
379	Meigle	Meigle, and part of Coupar-Angus.
386b	Persie	Parts of Alyth, Blairgowrie, and Kirkmichael.
387	Perth	Perth, and part of Kinnoull.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenantry	Parts of Blair-Athol and Moulin.
402	Anstruther-Easter	Anstruther-Easter, and part of Kilrenny.
417	Crail	Part of Crail and May Island.
423	Dunbog	Dunbog, and part of Flisk.
425	Dunino	Dunino, and part of Crail.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
488	St Ninians	Parts of St Ninians and Stirling.
490	Stirling	Parts of St Ninians and Stirling.
496	Dumbarton	Dumbarton, and part of Cardross.
504	Ardchattan	Part of Ardchattan and Muckairn.
505	Ardnamurchan	(1) Parts of Ardnamurchan and of Arisaig and Moldart.
506	Ballachulish, etc.	Parts of Kilmallie and Ardgour.
509	Cumlodden and Minard	Parts of Glassary and Inveraray.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan, etc.	(1) Parts of Kilchrenan and Dalavich, and Glenorchy and Inishail; (2) Remainder of Kilchrenan and Dalavich.
520	Kilmallie	Parts of Kilmallie and Ardgour.
525	Lismore	Lismore and Appin, and part of Ardgour.
526	Lochgilthead	Parts of Glassary and South Knapdale.
529	Muckairn	Parts of Ardchattan and Muckairn, and Glenorchy and Inishail.
535	Tarbert	Parts of Kilcalmonell, Saddell and Skipness, and South Knapdale.
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelveie	Part of Pennygown and Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and Pennygown and Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
550	Torosay	Part of Pennygown and Torosay.
556	Lochranza	Parts of Kilbride and Kilmore.
559b	Bridge-of-Weir	Parts of Houston and Killellan, and Kilbarchan.
572	Neilston	(1) Part of Neilston; (2) Remainder of Neilston, and part of Paisley.
576	Ardrossan	(1) Parts of Ardrossan and West Kilbride; (2) Remainder of Ardrossan.
584b	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
610b	Patna	Parts of Dalmellington, Dalrymple, Kirkmichael, and Straiton.
622	Barony	Part of Glasgow.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	Parts of Glasgow and Govan Combination.

CONSTITUTION OF THE DISTRICTS—*continued.*

No.	Districts.	Component Parts (Parishes).
685	Edinburgh . . .	City Parish of Edinburgh, and parts of Duddingston and Liberton.
695 <i>b</i>	New Craighall . . .	Parts of Inveresk and Liberton.

* The actual number of Districts is 1072—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 8 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place compound names in the order in which they are pronounced.
